Epri Water Guide:

EPRI Guide, 1983 **Corrosion Tests and Standards** Robert Baboian, 2005 **Comprehensive Nuclear Materials**, 2020-07-22

Materials in a nuclear environment are exposed to extreme conditions of radiation temperature and or corrosion and in many cases the combination of these makes the material behavior very different from conventional materials This is evident for the four major technological challenges the nuclear technology domain is facing currently i long term operation of existing Generation II nuclear power plants ii the design of the next generation reactors Generation IV iii the construction of the ITER fusion reactor in Cadarache France iv and the intermediate and final disposal of nuclear waste In order to address these challenges engineers and designers need to know the properties of a wide variety of materials under these conditions and to understand the underlying processes affecting changes in their behavior in order to assess their performance and to determine the limits of operation *Comprehensive Nuclear Materials Second Edition Seven Volume Set* provides broad ranging validated summaries of all the major topics in the field of nuclear material research for fission as well as fusion reactor systems Attention is given to the fundamental scientific aspects of nuclear materials fuel and structural materials for fission reactors waste materials and materials for fusion reactors The articles are written at a level that allows undergraduate students to understand the material while providing active researchers with a ready reference resource of information Most of the chapters from the first Edition have been revised and updated and a significant number of new topics are covered in completely new material During the ten years between the two editions the challenge for applications of nuclear materials has been significantly impacted by world events public awareness and technological innovation Materials play a key role as enablers of new technologies and we trust that this new edition of *Comprehensive Nuclear Materials* has captured the key recent developments Critically reviews the major classes and functions of materials supporting the selection assessment validation and engineering of materials in extreme nuclear environments Comprehensive resource for up to date and authoritative information which is not always available elsewhere even in journals Provides an in depth treatment of materials modeling and simulation with a specific focus on nuclear issues Serves as an excellent entry point for students and researchers new to the field *EPRI Journal* Electric Power Research Institute, 1991 *Steam Generators for Nuclear Power Plants* Jovica Riznic, 2017-05-24

Steam Generators for Nuclear Power Plants examines all phases of the lifecycle of nuclear steam generators NSGs components which are essential for the efficient and safe operation of light water reactors LWRs Coverage spans the design manufacturing operation and maintenance fitness for service and long term operation of these key reactor parts Part One opens with a chapter that provides fundamental background on NSG engineering and operational experiences Following chapters review the different NSG concepts describe NSG design and manufacturing and consider the particularities of SGs for VVER reactors Part Two focuses on NSG operation and maintenance starting with an overview of the activities required to support reliable and safe operation The discussion then moves on to tubing vibration

followed by the water and steam cycle chemistry issues relevant to the NSG lifecycle Finally a number of chapters focus on the key issue of corrosion in NSGs from different angles This book serves as a timely resource for professionals involved in all phases of the NSG lifecycle from design manufacturing operation and maintenance to fitness for service and long term operation It is also intended as a valuable resource for students and researchers interested in a range of topics relating to NSG lifecycle management Fulfills the need for a detailed reference on steam generators for nuclear power plants Contains comprehensive coverage of all phases of the nuclear steam generator lifecycle from design manufacturing operation and maintenance to fitness for service and long term operation in one convenient volume Presents contributions from key manufacturers and research institutes and universities *Electric Power Distribution Handbook* Thomas Allen

Short,2018-09-03 Of the big three components of electrical infrastructure distribution typically gets the least attention In fact a thorough up to date treatment of the subject hasn t been published in years yet deregulation and technical changes have increased the need for better information Filling this void the Electric Power Distribution Handbook delivers comprehensive cutting edge coverage of the electrical aspects of power distribution systems The first few chapters of this pragmatic guidebook focus on equipment oriented information and applications such as choosing transformer connections sizing and placing capacitors and setting regulators The middle portion discusses reliability and power quality while the end tackles lightning protection grounding and safety The Second Edition of this CHOICE Award winner features 1 new chapter on overhead line performance and 14 fully revised chapters incorporating updates from several EPRI projects New sections on voltage optimization arc flash and contact voltage Full color illustrations throughout plus fresh bibliographic references tables graphs methods and statistics Updates on conductor burndown fault location reliability programs tree contacts automation and grounding and personnel protection Access to an author maintained support website distributionhandbook.com with problems sets resources and online apps An unparalleled source of tips and solutions for improving performance the Electric Power Distribution Handbook Second Edition provides power and utility engineers with the technical information and practical tools they need to understand the applied science of distribution **EPRI NP.** Electric Power Research

Institute,1982 DNAPL Site Evaluation James W. Mercer,Robert M. Cohen,2024-11-01 DNAPL Site Evaluation covers long term contamination of ground water by DNAPL dense non aqueous phase liquids chemicals The book develops a framework for planning and implementing DNAPL site characterization activities It provides detailed methods to identify characterize and monitor sites and analyzes their utility limitations risks availability and cost Methods to interpret contaminant fate and transport are identified and new site characterization methods are assessed DNAPL Site Evaluation will maximize the cost effectiveness of site investigation remediation by providing the best information available to describe and evaluate methods to be used for determining the presence fate and transport of subsurface DNAPL contamination The book will be a useful reference for groundwater professionals and environmental regulatory personnel The Creation of Markets for Ecosystem

Services in the United States Mattijs van Maasakkers, 2016-11-01 The Creation of Markets for Ecosystem Services in the United States is a detailed analysis of the most advanced efforts to create markets for ecosystem services in the United States With the help of in depth case studies of three well known attempts to create such markets in the Chesapeake Bay watershed the Ohio River basin and the Willamette River basin the book explains why very few of these markets have actually succeeded even after close to two decades of much scholarly enthusiasm significant federal funding and concerted efforts by NGOs government agencies and private businesses Based on interviews policy analysis and participatory observation three features of markets for ecosystem services emerge as particularly problematic First the logic of displacement or the idea that particular elements of an ecosystem can be separated and traded across landscapes or watersheds runs counter to political interests environmental beliefs and people's connections to specific places The second problem is that of measurement Quantification methods embed a range of often contentious assumptions and decisions about what counts when restoring ecosystems The third problem is related to participation in environmental decision making

Materials & Components in Fossil Energy Applications, 1975 **Dose Control at Nuclear Power Plants** National Council on Radiation Protection and Measurements, 1994 This report is focused on dose control for the occupational exposures associated with the operation and maintenance of nuclear power plants After providing a background and history of dose control the report presents quantitative methods that can be used as part of the decision making process involved in satisfying dose limits and optimizing radiation exposure The Report then provides an approach that management at nuclear plants can use to organize direct and administer a program aimed at keeping doses as low as reasonably achievable ALARA Also provided are ways to assess the effectiveness of these programs including evaluation techniques program reviews procedure reviews and accountability procedures Design considerations that have been successful in reducing doses at nuclear power plants are discussed Finally the report treats operational considerations necessary for implementing dose control during the operational lifetime of a plant **Nuclear Safety**, 1983 *Energy Research Abstracts*, 1989 *Fish passage technologies : protection at hydropower facilities.*, 1995 The focus of this report is technologies for fish passage around hydropower generation facilities and protection against entrainment and turbine mortality Emphasis is given to Federal Energy Regulatory Commission FERC licensed hydropower projects where fish protection is a subject of controversy and congressional interest due to the Federal Power Act FPA and the Electric Consumers Protection Act ECPA Thus institutional issues related to FERC relicensing are also discussed Major points of controversy are highlighted in box 1 1

Nuclear Corrosion Science and Engineering Damien Feron, 2012-02-21 Corrosion of nuclear materials i e the interaction between these materials and their environments is a major issue for plant safety as well as for operation and economic competitiveness Understanding these corrosion mechanisms the systems and materials they affect and the methods to accurately measure their incidence is of critical importance to the nuclear industry Combining assessment techniques and

analytical models into this understanding allows operators to predict the service life of corrosion affected nuclear plant materials and to apply the most appropriate maintenance and mitigation options to ensure safe long term operation This book critically reviews the fundamental corrosion mechanisms that affect nuclear power plants and facilities Initial sections introduce the complex field of nuclear corrosion science with detailed chapters on the different types of both aqueous and non aqueous corrosion mechanisms and the nuclear materials susceptible to attack from them This is complemented by reviews of monitoring and control methodologies as well as modelling and lifetime prediction approaches Given that corrosion is an applied science the final sections review corrosion issues across the range of current and next generation nuclear reactors and across such nuclear applications as fuel reprocessing facilities radioactive waste storage and geological disposal systems With its distinguished editor and international team of expert contributors Nuclear corrosion science and engineering is an invaluable reference for nuclear metallurgists materials scientists and engineers as well as nuclear facility operators regulators and consultants and researchers and academics in this field Comprehensively reviews the fundamental corrosion mechanisms that affect nuclear power plants and facilities Chapters assess different types of both aqueous and non aqueous corrosion mechanisms and the nuclear materials susceptible to attack from them Considers monitoring and control methodologies as well as modelling and lifetime prediction approaches Energy Abstracts for Policy Analysis ,1987
