European Design Guide For Tensile Surface Structures:

The European Design Guide for Tensile Surface Structures Brian Forster, Marijke Mollaert, 2004 **European Design Guide for Surface Tensile Structures**, 2004 *Construction Manual for Polymers + Membranes* Jan Knippers, Jan Cremers, Markus Gabler, Julian Lienhard, 2012-12-17 Whether it be as translucent sheets broadly stretched membranes and inflated foil cushions or in graceful organic curves architecture today is utilizing plastics in the most disparate forms and for a wide variety of purposes Innovative technical developments are constantly improving its material properties at the same time there is a growing new awareness of its potential as a construction material While plastics used to be employed primarily as an inexpensive variant on traditional building materials they are increasingly regarded in the construction world today as a serious and viable alternative be it as supporting structures roofs facades or elements of interior design and decoration Thanks in large part to this inherent self sufficiency plastics are currently enjoying an unprecedented surge in popularity even among the international architectural avant garde as multiwall sheets or corrugated fiber reinforced panels or as filling between glass panes And the new generation of ecological bioplastics also pays tribute to the debate on sustainability ridding plastics of their lingering reputation as environmental offenders From the history of plastics and membranes in architecture to their material properties and requirements in construction and design the *Plastics and Membranes Construction Manual* cuts to the chase providing the kind of solid and comprehensive overview of the subject that readers have come to expect from the Im DETAIL series Selected project examples round off the reference work and make it indispensable for the day to day life of the professional planner and for every architecture library *Fabric Structures in Architecture* J Llorens, 2015-03-28 *Fabric Structures in Architecture* covers the varying ways textiles and their properties are used in building construction with particular focus given to tensile structures The text begins with the fundamental principles of textiles including the origins of fabric architecture then progressing to a discussion of the modern textiles of today It covers relevant textile materials and their properties including coatings and membranes In addition a range of design considerations are discussed with detailed information on installation and failure modes A series of case studies from around the world accompany the discussion illustrating the applications of textiles in architecture Offers key coverage of the fundamental principles from the origins of fabric architecture to modern textile Provides analysis of relevant textile materials and their properties including coatings and membranes Contains expert insights in to the applications of textiles in architecture presenting a series of relevant case studies from around the world **Textiles, Polymers and Composites for Buildings** G Pohl, 2010-09-27 Textiles polymers and composites are increasingly being utilised within the building industry This pioneering text provides a concise and representative overview of the opportunities available for textile polymer and composite fibres to be used in construction and architecture The first set of chapters examine the main types and properties of textiles polymers and composites used in buildings Key topics include the types and production of

textiles the use of polymer foils and fibre reinforced polymer composites as well as textiles and coatings for tensioned membrane structures The second part of the book presents a selection of applications within the building industry Chapters range from the use of textiles in tensile structures sustainable building concepts with textile materials innovative composite fibre applications for architecture to smart textile and polymer fibres for structural health monitoring With its distinguished editor and team of international contributors Textiles polymers and composites for buildings is an important reference for architects fabric manufacturers fibre composite experts civil engineers building designers academics and students Provides a concise and representative overview of the opportunities available for textile polymer and composite fibres to be used in construction Provides an insight into how high tech textiles already influence our daily lives as well as potential applications in modern buildings Features a thorough discussion of technical characteristics and requirements of textiles used for buildings and construction

Biaxial Testing for Fabrics and Foils Paolo Beccarelli, 2015-01-30 This book offers a well structured critical review of current design practice for tensioned membrane structures including a detailed analysis of the experimental data required and critical issues relating to the lack of a set of design codes and testing procedures The technical requirements for biaxial testing equipment are analyzed in detail and aspects that need to be considered when developing biaxial testing procedures are emphasized The analysis is supported by the results of a round robin exercise comparing biaxial testing machines that involved four of the main research laboratories in the field The biaxial testing devices and procedures presently used in Europe are extensively discussed and information is provided on the design and implementation of a biaxial testing rig for architectural fabrics at Politecnico di Milano which represents a benchmark in the field The significance of the most recent developments in biaxial testing is also explored

Sustainable Ecological Engineering Design Mohammad Dastbaz, Chris Gorse, 2016-05-19 This book focuses on the impacts of the built environment and how to predict and measure the benefits and consequences of changes taking place to address sustainability in the development and building industries It draws together the best treatments of these subjects from the Leeds Sustainability Institute's inaugural International Conference on Sustainability Ecology Engineering Design for Society SEEDS The focus of discussion is on understanding how buildings and spaces are designed and nurtured to obtain optimal outcomes in energy efficiency and environmental impacts In addition to examining technical issues such as modeling energy performance emphasis is placed on the health and well being of occupants This holistic approach addresses the interdependence of people with the built and natural environments The book's contents reflect the interdisciplinary and international collaboration critical to assembly of the knowledge required for positive change

Structures and Architecture Paulo J. Cruz, 2013-06-27 Although the disciplines of architecture and structural engineering have both experienced their own historical development their interaction has resulted in many fascinating and delightful structures To take this interaction to a higher level there is a need to stimulate the inventive and creative design of architectural structures and to persua

Lightweight Energy Alessandra Zanelli, Carol Monticelli, Nebojsa Jakica, Zhengyu Fan, 2022-11-30 This book explores membrane materials as a means of translating natural and renewable resources into a more flexible dynamic and reactive architectural skin. It represents the first time that energy saving design has been addressed systematically in relation to lightweight building systems and tensile membranes. Understanding of the energetic behavior of membranes and foils used as a building envelope is a fundamental theme as it is the integration of flexible photovoltaics in membranes as well as the exploitation of water and wind resources. A theoretical methodological framework for consciously designing the membrane life cycle is presented. The authors cross cut and combine exploration of climate based design methodology and life cycle thinking strategies. Both active and passive systems are investigated referring to alternative productive resources like sun, wind and water. Case studies are brought forward in the book's second half highlighting energy lightness for an increasingly dematerialized architecture and addressing inherent issues. Four main research and development paths are presented: the first two focusing on advancements in facade materials and Photovoltaic systems applicable to membrane architecture; the third referring to fog and dew harvesting; and the fourth dealing with the future frontier of flexible transparency and designs for well being through a passive solar system.

Fibrous and Composite Materials for Civil Engineering Applications R Figueiro, 2011-04-19 The use of fibrous materials in civil engineering both as structural reinforcement and in non structural applications such as geotextiles is an important and interesting development. *Fibrous and composite materials for civil engineering applications* analyses the types and properties of fibrous textile and structures and their applications in reinforcement and civil engineering. Part one introduces different types of fibrous textiles and structures. Chapters cover the properties of natural and man made fibres and of yarns as well as an overview of textile structures. Part two focuses on fibrous material use in concrete reinforcement with chapters on the properties and applications of steel fibre reinforced concrete, natural fibre reinforced concrete and the role of fibre reinforcement in mitigating shrinkage cracks. In part three the applications of fibrous material based composites in civil engineering are covered. Chapters concentrate on production techniques and applications such as reinforcement of internal structures, structural health monitoring and textile materials in architectural membranes. With its distinguished editor and international team of contributors, *Fibrous and composite materials for civil engineering applications* is a standard reference for fabric and composite manufacturers, civil engineers and professionals as well as academics with a research interest in this field. Explores the development of fibrous materials in civil engineering both as structural reinforcement and in non structural applications such as geotextiles. Key topics include short fibre reinforced concrete, natural fibre reinforced concrete and high performance fibre reinforced cementitious composites. A standard reference for fabric and composite manufacturers, civil engineers and professionals as well as academics with a research interest in this field.
