

Evidence of Evolution

Background

When Charles Darwin first proposed the idea that all new species descend from an ancestor, he performed an exhaustive amount of research to provide as much evidence as possible. Today, the major pieces of evidence for this theory can be broken down into the fossil record, embryology, comparative anatomy, and molecular biology.

Fossils

This is a series of skulls and front leg fossils of organisms believed to be ancestors of the modern-day horse.

				
				
Equus (modern horse)	Pliohippus	Merychippus	Meshippus	Eohippus (Dawn Horse)

1. Give two similarities between each of the skulls that might lead to the conclusion that these are all related species.

The skulls all have a similar ridge that protrudes from the top. The overall shape is the same. Each skull has a set of flattened teeth. Each skull has a large diastema, or gap between the front and back teeth.

2. What is the biggest change in skull anatomy that occurred from the dawn horse to the modern horse?

The size of the skull is dramatically larger in the modern horse.

3. What is the biggest change in leg anatomy that occurred from the dawn horse to the modern horse?

The modern horse, in addition to having much longer legs, has developed hooves in place of hand/foot bones.
