Merkel International Manual, 2009 *The United States Patents Quarterly*, 2006 **On-line Hemodiafiltration** Gerd Krick, Claudio Ronco, 2011 A history and outlook On line HDF represents a major technical development in the delivery of hemodialysis therapy. It combines the properties of increased diffusion available in current high flux membranes with convective removal of between 6 and 30 liters per treatment and requires the use of ultrapure water and online filtration of replacement fluid. On line HDF has been successfully introduced in Europe and Asia and is routinely prescribed for dialysis patients in these regions. The book at hand summarizes the history and achievements of on line HDF in four parts. A report of the technological development in both machine and fiber dialyzer is followed by a description of the challenges encountered in the evolution of on line HDF collecting the accounts of clinical key opinion leaders who had been involved in its early application. The third part presents a comprehensive review of the clinical results achieved with on line HDF from its inception to the present times in which it represents the clinical golden standard. The fourth and final part is dedicated to on line HDF as a vision for the future

Moving Points in Nephrology Edmund Bourke, N. P. Mallick, V. E. Pollak, 1993-01-01 *Short Dialysis* Andrea Cambi, 2012-12-06 Vittorio E Andreucci of keeping alive patients in terminal chronic. Initially created with the purpose renal failure dialysis has undergone improvements in methodology and its final goal has become complete health rehabilitation and optimization of the quality of life of chronic dialysis patients. To achieve this many investigators have attempted to increase dialysis efficiency and at the same time shorten dialysis time. Their main concern was obviously patient safety the Latin proverb *primum non nocere* is still valid all over the world. Thus when clinical observations of the first patients on regular dialysis therapy suggested an inverse

relationship between duration of dialysis sessions and severity of peripheral neuropathy long and frequent dialysis sessions were considered the only way to prevent the catastrophic consequences of nerve damage and underdialysis syndrome It was then in 1971 when dialysis duration was 8 12 hours per session that Vincenzo Cambi started a short dialysis trial i e 4 hours 3 times weekly or 3 hours every second day For the first time dialysis was shortened from 24 36 hours weekly to 10 5 12 hours weekly 1 2 In 1971 I was still at the Parma University Hospital We had both just returned from the United States and Dr Cambi was responsible for the dia lysis unit *Clinical Nephrology* ,2000 **Therapeutic Hemapheresis in the 1990s** U.
