Higgs Hunters Guide:

The Higgs Hunter's Guide John F. Gunion, Howard Haber, Gordon Kane, Sally Dawson, 2000-07-14 The Higgs Hunter's Guide is a definitive and comprehensive guide to the physics of Higgs bosons. In particular it discusses the extended Higgs sectors required by those recent theoretical approaches that go beyond the Standard Model including supersymmetry and superstring inspired models.

Perspectives on Higgs Physics II G. L. Kane, 1997 The Standard Model of particle physics is extremely successful in describing nature. It is however incomplete in one major way: the masses of gauge bosons and fermions enter the Standard Model through the Higgs mechanism. That is completely satisfactory technically, but it is not understood physically. We do not yet know what nature really does to give mass to particles. Understanding Higgs physics is necessary in order to complete the Standard Model and to learn how to extend it and improve its foundations. This book is a collection of current work and thinking about these questions by active workers. It speculates about what form the answers will take as well as updates and extends previous books and reviews. Some chapters emphasize theoretical questions; some focus on connections with other areas of physics and some discuss how we can get data to uncover nature's solution. This second edition adds information and insights from the last five years, including the recent indirect but statistically significant evidence for the existence of a Higgs boson from precision measurements. It contains contributions from Blondel, Quiros, Haber, Pokorski, Dawson, Janot, Mrenna, Gunion, Ibanez, Ross, Bigi, Carena, Wagner, Georgi, Chanowitz, Yuan, Hill, and others.

Higgs Particle(s) A. Ali, 2013-06-29 The proceedings of the July 1989 Workshop contribute to the ongoing scientific debate on the best strategies of discovering the Higgs boson and top quark. The papers are organized in five parts covering theoretical issues, searches for light scalars, Higgs searches in hadronic collisions, Higgs searches in e^+e^- annihilation, and present experiments.

Higgs Puzzle, The: What Can We Learn From Lep2, Lhc, Nlc, And Fmc? - Proceedings Of The 1996 Ringberg Workshop Bernd A. Kniehl, 1997-07-15 Despite the great success of the standard model of electroweak and strong interactions to describe the phenomena observed in high energy physics experiments, the mechanism by which the

elementary particles are endowed with their masses is yet to be unraveled Does nature choose the Higgs mechanism of spontaneous symmetry breaking as predicted by the standard model or do we need some alternative explanation The purpose of the workshop is to capture new trends and ideas in this exciting area of fundamental physics and to explore the potential of recent LEP present HERA LEP II SLC Tevatron and future FCC LHC NLC colliding beam experiments to shed light on the Higgs puzzle *Physics And Experiments With Linear Colliders (In 2 Vols)* P Eerola, Markus Nordberg, Risto Orava, 1992-11-20 This workshop brought together for the first time accelerator experts as well as experimental and theoretical high energy physicists from all over the world to consider the physics potential of high energy linear electron positron colliders A wide variety of physics cases were presented ranging from precision tests of the top quark and electroweak gauge bosons to searches of the intermediate mass Higgs bosons and supersymmetric particles *Elementary Particle Physics* Andrew J. Search For New Elementary Particles, The: Status And Prospect - Proceedings Of The Trieste Workshop Martin Lewis Perl, L Beers, G Herten, 1993-06-14 It has been more than a decade since new elementary particles were discovered To recognize the findings of scientists in this still fairly new but exciting and promising area of research the Trieste Workshop was organised in May 1992 to discuss the status and explore the prospects for the discovery of new elementary particles using the full variety of search methods which are or will be available to the physicist All papers in this collection of proceedings are reviews written by experts in their own area of speciality Many review papers based on experimental findings are also included To present a clearer and more coherent overview a theoretical overview talk as well as a summary talk have been included to serve as a link between the various areas that were discussed in the papers This collection of papers is perhaps the first authoritative source ever published on the search for new elementary particles Perspectives in the Standard Model R.  calculation of physical properties of particles **Dark Matter in Astrophysics and Particle Physics** Hans Volker
 Klapdor-Kleingrothaus, 2010 Dark matter and dark energy are one of the central mysteries in modern physics although
 modern astrophysical and cosmological observations and particle physics experiments can and will provide vital clues in
 uncovering its true nature The DARK 2009 Conference brought together World s leading researchers in both astrophysics
 and particle physics providing an opportunity and platform to present their latest results to the community The topics
 covered are wide ranging from terrestrial underground experiments to space experimental efforts to search for dark matter
 and on the theoretical aspects from the generating of a fifth family as origin of dark matter extra dimensions and dark matter
 to non standard Wigner classes and dark matter One of the new highlights was certainly a possible connection between a
 neutrino mass as observed by nuclear double beta decay and the dark energy Highly important and relevant in its field the
 book presents a vital snapshot of the sometimes seemingly disparate areas of dark matter research and offers an exciting
 overview of current ideas and future directions **Proceedings of the 7th International Symposium Particles, Strings
 and Cosmology** Kingman Cheung, John Francis Guion, Stephen Mrenna, 2000 The PASCOS International Symposium on
 Particles Strings and Cosmology series brings together the leading experts and most active young researchers in the closely
 related fields of elementary particle physics string theory and cosmology astrophysics These areas of research have become
 increasingly intertwined in recent years each having direct impact on the others In particular there has been a dramatic
 expansion of ideas from particle theory and string theory that have vast impact on cosmology especially our picture of the
 early universe and its evolution Correspondingly the proliferation of data regarding the early universe and its increasing
 precision has begun to strongly constrain the theoretical models Meanwhile observations of neutrino oscillations and cosmic
 ray excesses and limits on new physics from colliders and other particle experiments as well as the resulting restrictions on
 theoretical and phenomenological modeling are becoming ever stronger During PASCOS99 it became clear that the long
 awaited era of convergence of these fields is truly at hand The proceedings of PASCOS 99 reflect the accelerating overlap
 and convergence of the fields of elementary particles physics string theory and cosmology astrophysics Plenary reviews by
 leading figures in these fields provide perspectives on these interrelationships and up to the minute summaries of recent

progress in the various areas Parallel talk summaries focus on many of the topics within each field of greatest current interest and activity Both the plenary and parallel writeups are designed to be descriptive in nature and avoid being overly technical As a result the volume can serve as a useful reference for students and professionals in all three fields Careful referencing allows further pursuit of a given topic Overall the proceedings are unique in that they not only bring together in a single volume comprehensive overview of the great progress being made in all three of these very exciting fields but also provide a snapshot of how particles strings and cosmology are increasingly impacting one another *Particles, Strings And Cosmology (Pascos 99), Procs Of 7th Intl Symp* Kingman Cheung, John F Gunion, Stephen Mrenna, 2000-08-30 The PASCOS International Symposium on Particles Strings and Cosmology series brings together the leading experts and most active young researchers in the closely related fields of elementary particle physics string theory and cosmology astrophysics These areas of research have become increasingly intertwined in recent years each having direct impact on the others In particular there has been a dramatic expansion of ideas from particle theory and string theory that have vast impact on cosmology especially our picture of the early universe and its evolution Correspondingly the proliferation of data regarding the early universe and its increasing precision has begun to strongly constrain the theoretical models Meanwhile observations of neutrino oscillations and cosmic ray excesses and limits on new physics from colliders and other particle experiments as well as the resulting restrictions on theoretical and phenomenological modeling are becoming ever stronger During PASCOS99 it became clear that the long awaited era of convergence of these fields is truly at hand The proceedings of PASCOS 99 reflect the accelerating overlap and convergence of the fields of elementary particles physics string theory and cosmology astrophysics Plenary reviews by leading figures in these fields provide perspectives on these interrelationships and up to the minute summaries of recent progress in the various areas Parallel talk summaries focus on many of the topics within each field of greatest current interest and activity Both the plenary and parallel writeups are designed to be descriptive in nature and avoid being overly technical As a result the volume can serve as a useful reference for students and professionals in all three fields Careful referencing allows further pursuit of a given topic Overall the proceedings are unique in that they not only bring together in a single volume comprehensive overview of the great progress being made in all three of these very exciting fields but also provide a snapshot of how particles strings and cosmology are increasingly impacting one another
