Financial Accounting David Alexander, Christopher Nobes, 2004 Looking for an introductory text in financial accounting. Then look no further than this book created by an experienced author team specifically for those with little or no previous knowledge of the subject. With a clear written style this accessible book is unique in teaching financial accounting from a non country specific perspective using International Financial Reporting Standards IFRS as its framework to explain concepts and standards. Building on the success of the first edition this truly international book continues to draw examples from Europe, the US and beyond and has been updated to incorporate the extensive changes of the past three years. Key features: New Expanded and amended coverage of group accounting and of financial analysis. Real life examples are included from a wide range of countries. Activities and Why it Matters boxes integrated throughout each chapter to challenge students and stimulate further interest. End of chapter self assessment questions and answers. Exercises at the close of each chapter. Includes a glossary of terms used in IFRS and UK and US accounting. Ideal for undergraduate and MBA students worldwide taking a first course in financial accounting maybe highlight this or put in a separate box. This book is particularly timely.
