Assessment of Built Environment Gopal Alapure, Abraham George, 2025-02-18 This book focuses on developing a holistic sustainability assessment model for built environment that can help in identifying sustainability issues and parameters for the built environment It covers a wide range of sustainable built form issues in the local and regional contexts The volume identifies significant built form sustainability indicators criteria and sub criterion while highlighting the importance of incorporating sustainability principles and assessment of sustainability It also discusses the data collection process for defining priorities of sustainability parameters using the Analytic Hierarchy Process AHP technique The book presents information to obtain fuzzy weights to classify assessed built form The chapters in this book explain the development of an integrated built environment assessment system for infrastructure projects This book will be of interest to students teachers and researchers of planning architecture construction urban studies interior designing urban planning and civil engineering It will also be useful for architects planners civil engineers interior designers builders developers green building assessors and those interested in the sustainable assessment built environment and urban development **Comparison of energy efficient and green buildings** Shrestha, Shritu, 2016-04-18 The adverse environmental impacts from inefficient building construction increase if measures to reduce energy and resource use through stringent building policies and efficient technology are not implemented in developed and developing countries To illustrate a holistic approach to reducing buildings energy and resources the comparison of energy efficient and green buildings in terms of their technological aspects and their policy context in developed and developing countries mainly in Europe the USA and India is presented together with a policy package recommendation for Nepal A quality review of multiple literature sources supported by various expert opinions were the methods used for this in depth analysis It discusses that mandatory building standards voluntary labels information instruments and financial incentives are the most effective combination for the shift towards market transformation that results in a higher share of energy efficient and green buildings The lesson such as higher compliance with and enforcement of building energy standards can be seen in developed countries e g Germany Looking at a building s life cycle perspective it is not sufficient to focus solely on operational energy reduction in higher energy efficient buildings as this is achieved by the

increased use of energy intensive materials Green requirements must be considered in updating building energy standards and labels particularly for developed countries Green building certification will also become more effective when the stringency of energy standards is higher and when the whole building life cycle assessment is considered Due to the increasing scarcity of energy and resources many developing countries are forced to face up to the need for holistic green buildings Although baseline standards are not as high as in most developed countries and national financial support is low the gradual move towards making the standards more stringent and incorporating the wider scope of resource saving are positive developments in developing countries e g India However to achieve significant success strategies must include the establishment of a suitable funding environment a political commitment and a strong government vision for long term and sustainable building construction The challenges faced by Nepal are even greater due to the fast pace of urban growth and the absence of energy and resource efficient buildings policies highlighting the need for an effective policy package Overall this dissertation demonstrates how energy efficient and green buildings are interlinked Green buildings reinforced with higher levels of energy efficiency and energy efficient buildings incorporating green requirements are stepping stones for achieving greater building energy and resource efficiencies And a suitable policy package fosters its development

Nachteilige Umweltwirkungen eines ineffizienten Bausektors nehmen zu wenn Maßnahmen zur Reduktion des Energie und Ressourcenbedarfs in Form stringenter Gebäudepolitiken und effizienter Technologie in Industrieländer und Entwicklungsländer nicht umgesetzt werden Um einen ganzheitlichen Ansatz zur Reduktion des Energie und Ressourcenbedarfs von Gebäuden abzubilden werden energieeffiziente und grüne Gebäude hinsichtlich technologischer Aspekte und ihres Politikkontextes in Industrie und Entwicklungsländern verglichen Die Analysen beziehen sich hauptsächlich auf Europa die USA und Indien und werden ergänzt um Empfehlungen für ein Maßnahmenpaket für Nepal Ein Review unterschiedlicher Literaturquellen unterstützt durch diverse Expertenmeinungen stellt die methodische Grundlage für diese detaillierte Analyse dar Es diskutiert dass Bauvorschriften und standards freiwillige Label Informationsinstrumente und finanzielle Anreize bilden die effektivste Kombination für die Einleitung einer Markttransformation die schließlich zu einem höheren Anteil energieeffizienter und grüner Gebäude führt Gute Beispiele einer höheren Beachtung von Gebäudeenergiestandards und deren Weiterentwicklung existieren in verschiedenen Industrieländern wie Deutschland Unter Berücksichtigung des Lebenszyklus von Gebäuden ist es nicht ausreichend nur die Reduktion des Energieverbrauchs in der Nutzungsphase der Gebäude zu beachten weil diese den Einsatz von Materialien mit hohem Energieverbrauch in der Herstellung bedeuten kann Grüne Anforderungen müssen in der zukünftigen Entwicklung von Gebäudeenergiestandards und labels berücksichtigt werden insbesondere in Industrieländern Die Zertifizierung grüner Gebäude wird auch effektiver werden wenn Energiestandards verschärft werden und wenn vollständige Gebäudekobilanzen berücksichtigt werden Auf Grund steigender Knappheit von Energie und Ressourcen sind viele Entwicklungsländer gezwungen sich der Notwendigkeit grüner Gebäude zu stellen Obwohl das Niveau von Mindeststandards

unterhalb dessen der meisten entwickelten Ländern liegt und die finanzielle Unterstützung gering ist sind die schrittweise Verschärfung der Standards und die Einbeziehung der weiteren Perspektive der Ressourcenschonung positive Entwicklungen in Entwicklungsländern wie Indien. Um erfolgreich zu sein müssen bestehende Strategien umfasst werden an die Schaffung eines geeigneten Rahmens die politische Bekenntnis und eine starke Regierungsvision für einen langfristigen und nachhaltigen Bausektor. Die Herausforderungen mit denen Nepal konfrontiert wird sind noch umfangreicher. Sie resultieren aus einem schnellen urbanen Wachstum und dem Fehlen von energie- und ressourceneffizienten Gebäudepolitiken. Die Erforderlichkeit eines effektiven Maßnahmenpakets für Nepal wird hierdurch unterstrichen. Insgesamt wird hierdurch der Zusammenhang zwischen energieeffizienten und grünen Gebäuden aufgezeigt. Die verstärkte Berücksichtigung von Energieeffizienz in grünen Gebäuden sowie von Nachhaltigkeitsanforderungen in energieeffizienten Gebäude sind Sprungbretter für die verbesserte Energie- und Ressourceneffizienz von Gebäuden. Eine solche Entwicklung wird durch ein geeignetes Maßnahmenpaket unterstützt.
