language this book will give all readers a new insight into some of the most enjoyable and fascinating aspects of geometry. Everyone knows what a triangle is yet very few people appreciate that the common three sided figure holds many intriguing secrets. For example if a circle is inscribed in any random triangle and then three lines are drawn from the three points of tangency to the opposite vertices of the triangle these lines will always meet at a common point no matter what the shape of the triangle. This and many more interesting geometrical properties are revealed in this entertaining and illuminating book about geometry. Flying in the face of the common impression that mathematics is usually dry and intimidating this book proves that this sometimes daunting abstract discipline can be both fun and intellectually stimulating. The authors two veteran math educators explore the multitude of surprising relationships connected with triangles and show some clever approaches to constructing triangles using a straightedge and a compass. Readers will learn how they can improve their problem solving skills by performing these triangle constructions. The lines points and circles related to triangles harbor countless surprising relationships that are presented here in a very engaging fashion.

Alien Intelligence and the Pathway to Mars Mary Bennett, 2021-05-04 Details how exploratory probes sent to Mars in the 1970s triggered a plethora of anomalous events, particularly crop circles, glyphs, and how these events are messages from ET intelligence to help us send a human mission to Mars. Reveals how the anomalous Cydonia region of Mars fits the Golden Ratio Spiral and looks at links between Martian formations and Earth's ancient sites. Illustrated throughout with color photographs, maps, and diagrams. In this full-color study based on 25 years of research, Mary Bennett explores the ancient and modern connections between Mars and Earth as well as how extraterrestrial intelligences are trying to assist us in constructing a viable spacecraft to take a human crew swiftly and safely to Mars. She details how exploratory probes sent to Mars in the 1970s triggered over three decades of anomalous yet scientifically validated events, including crop circles or crop glyphs. She explains how these formations, along with related events, encode advanced engineering concepts that offer solutions to the fundamental problems presently hindering long-haul crewed spaceflight, whether to the Moon, Mars, or

beyond Looking at the red planet itself the author reveals the scientifically verifiable evidence pointing to intelligent design on the surface of Mars specifically in the Cydonia region which fits the Golden Ratio Spiral She looks at the covert links between the Martian formations and Earth's ancient sites such as the Avebury landscape in England and the Giza Complex She describes how agencies concerned with space travel have been quietly mirroring areas of Mars through construction projects here on Earth revealing that many of the ET messages have already been partially decoded Taking you from a complex on Mars to the Teotihuacan pyramids in Mexico from phi ratios to the Pentagon from the Great Pyramid to quantum computing this exploration of the hidden influence of Mars shows that our abilities as a future space faring species began in the ancient past and are now coming to fruition **Journal of the Michigan Schoolmasters' Club** Michigan
