ARM-Based Microcontroller Multitasking Projects Dogan Ibrahim, 2020-05-14. Most microcontroller based applications nowadays are large complex and may require several tasks to share the MCU in multitasking applications. Most modern high speed microcontrollers support multitasking kernels with sophisticated scheduling algorithms so that many complex tasks can be executed on a priority basis. ARM based Microcontroller Multitasking Projects Using the FreeRTOS Multitasking Kernel explains how to multitask ARM Cortex microcontrollers using the FreeRTOS multitasking kernel. The book describes in detail the features of multitasking operating systems such as scheduling, priorities, mailboxes, event flags, semaphores, etc. before going on to present the highly popular FreeRTOS multitasking kernel. Practical working real time projects using the highly popular Clicker 2 for STM32 development board which can easily be transferred to other boards together with FreeRTOS are an essential feature of this book. Projects include LEDs flashing at different rates, Refreshing of 7 segment LEDs, Mobile robot where different sensors are controlled by different tasks, Multiple servo motors being controlled independently, Multitasking IoT project, Temperature controller with independent keyboard entry, Random number generator with 3 tasks, live generator display, home alarm system, car park management system and many more. Explains the basic concepts of multitasking. Demonstrates how to create small multitasking programs. Explains how to install and use the FreeRTOS on an ARM Cortex processor. Presents structured real world projects that enable the reader to create their own.

Building a Dedicated GSM GPS Module Tracking System for Fleet Management Franjieh El Khoury, Antoine Zgheib, 2018-01-31. This book shows how to build a INFelecPHY GPS Unit IEP GPS tracking system for fleet management that is based on 3G and GPRS modules. This model should provide reliability since it deals with several protocols: 1. HTTP and HTTPS to navigate, download and upload in real time the information to a web server; 2. FTP and FTTPS to handle in a non real time the files to the web application; and 3. SMTP and POP3 to send and receive email directly from the unit in case of any alert. Similar to a mobile device but without screen for display, it is multifunctional because it links to a GPRS module, a camera, a speaker, a headphone, a keypad and screen.

Microcontroller Education Dimosthenis E. Bolanakis, 2022-05-31. Microcontroller education has experienced tremendous change in recent years. This book attempts to keep pace with the most recent technology while holding an

opposing attitude to the No Need to Reinvent the Wheel philosophy The choice strategies are in agreement with the employment of today's flexible and low cost Do It Yourself DIY microcontroller hardware along with an embedded C programming approach able to be adapted by different hardware and software development platforms Modern embedded C compilers employ built-in features for keeping programs short and manageable and hence speeding up the development process However those features eliminate the reusability of the source code among diverse systems The recommended programming approach relies on the motto Code More to Learn Even More and directs the reader toward a low level accessibility of the microcontroller device The examples addressed herein are designed to meet the demands of Electrical Electronic Engineering discipline where the microcontroller learning processes definitely bear the major responsibility The programming strategies are in line with the two virtues of C programming language that is the adaptability of the source code and the low level accessibility of the hardware system Some accompanying material of the book can be found at http://bit.ly/mcu_files
