Recarbonizing global soils - A technical manual of recommended sustainable soil management Food and Agriculture Organization of the United Nations, Intergovernmental Technical Panel on
 Soils, 2021-09-08 During the last decades soil organic carbon SOC attracted the attention of a much wider array of specialists
 beyond agriculture and soil science as it was proven to be one of the most crucial components of the earth's climate system
 which has a great potential to be managed by humans Soils as a carbon pool are one of the key factors in several Sustainable
 Development Goals in particular Goal 15 Protect restore and promote sustainable use of terrestrial ecosystems sustainably
 manage forests combat desertification and halt and reverse land degradation and halt biodiversity loss with the SOC stock
 being explicitly cited in Indicator 15.3.1 This technical manual is the first attempt to gather in a standardized format the
 existing data on the impacts of the main soil management practices on SOC content in a wide array of environments
 including the advantages drawbacks and constraints This manual presents different sustainable soil management SSM
 practices at different scales and in different contexts supported by case studies that have been shown with quantitative data
 to have a positive effect on SOC stocks and successful experiences of SOC sequestration in practical field applications
 Volume 3 includes a total of 49 practices that have a direct impact on SOC sequestration and maintenance in cropland
