Safety Can't Be Measured Andrew S. Townsend, 2016-04-08 The British Prime Minister has avowed to kill off the health and safety culture which he described as a monster Nonetheless industries face ever increasing public expectation and legislative pressure to improve safety when actually rates of safety improvement have slowed to a standstill In *Safety Can't Be Measured* Andrew Townsend suggests the main reason for the stagnation of safety improvement is the failure to recognise the evolution in accident causation and to evolve with it He severely criticises some aspects of current day management of occupational safety and contends that everyone is trying to continuously improve something in which improvement cannot be measured so the received wisdom underpinning safety management and regulation is not evidence based and much of it is misguided What is measured is the absence of safety through incidents injuries and the occurrence of ill health We cannot continue to justify these ways of doing things and claiming success by association without admitting there might be other explanations In this series of short chapters occupational health and safety is put in context by demystifying the research regulation and management of health and safety Using evidence Townsend challenges orthodox dogma by demonstrating that currently unused data could help deduce how safety really works and thus support alternative thought processes from which new approaches to risk reduction and safety management could emerge *Energy Production and Management in the 21st Century II* C.A. Brebbia, F. Polonara, E.R. Magaril, G. Passerini, 2016-09-28 Discussing the future of energy production and management in a changing world this book presents the proceedings of the 2nd International Conference on Energy Production and Management in the 21st Century The Quest for Sustainable Energy The intention of the book is to examine the future of energy production and management in a changing world and follows on from the first and very successful meeting held in Ekaterinburg Russia in 2014 Developed societies require an ever increasing amount of energy resources which creates complex technological challenges The challenge in many cases is the conversion of new sources of energy into useful forms such as electricity heat and fuel while finding efficient ways of storing and distributing energy Equal challenges lie with the production of such renewable energy at an acceptable cost including damage to the environment as well as with integration of those resources into the existing infrastructure The book deliberates the energy use of industrial processes including the imbedded energy contents of materials such as those in the built environment Energy production distribution and usage result in environmental risks which need to be better understood They are part of the energy economics and relate to human environmental health as well as ecosystems behaviour A number

of topics are covered including Energy and the city Energy security Energy distribution Energy networks Processing of oil and gas emissions Pipelines Renewable energies Energy use in building Industry and transport Safety management Tight energy fields Energy and climate change and Biomass and biofuels *Safety with Lasers and Other Optical Sources* D. H. Sliney, J. Mellerio, 2013-11-11 Nearly a decade ago a general review article on the evaluation of optical radiation hazards was published in Applied Optics Sliney and Freasier 1973 This article received many favorable comments but also prompted many inquiries regarding specific optical hazard problems From this it became evident that a monograph rather than a supplemental and expanded article was needed to fill this literature gap relating to laser and optical radiation hazards The present work is designed to fill that gap and is structured to permit either classroom or self study use Much of the material in this book was developed in connection with short courses on laser safety and radiometry in which we have participated as well as from our previous articles In particular the sequence of chapters is based upon the experiences which we have had in lecturing in courses with different schedules One of the great difficulties in developing a text of this nature is that a broad multidisciplinary background must be included in order that the reader can comprehend all of the subject matter readily For this reason the material presented on anatomy and physiology is oriented toward the engineer or physical scientist while the review material on basic optical physics is intended more for the physician or life scientist
