Starting this early modern period, India, like the western world, suffered at a great degree, with a substantial portion of its forest cover being lost. According to [Hemachandra's](#) [Forest Survey of India](#), the first early modern forest survey, conducted between 1860 and 1870, the forest cover in India was estimated to be 1.5 million hectares. This was a significant loss, as the forest cover in India had been estimated to be 2.5 million hectares in the early modern period. The loss of forest cover was a result of a number of factors, including the need for land for agriculture, the need for timber for construction, and the need for land for the growing population. The loss of forest cover was a significant problem, as it led to a number of environmental problems, including soil erosion, water pollution, and the loss of biodiversity.
