

Final Technical Feasibility Study Report

Plant description

The CSTPS is a hybrid power station comprising a 30 MW solar steam generator and a gas-fired boiler capable of operating independently or with the solar field to maintain full steam supply to a conventional turbo-generator. This allows for full load solar generation during sunny periods, shared solar/gas generation during periods of low or variable solar insolation or full gas operation during the night or during periods of unbroken clouds.

The plant includes the following main features:

- A Novatec linear Fresnel SuperNova solar boiler, with 175,000 m² of reflectors and a total solar field area of 352,000m². This comprises both evaporating and superheating sections and is to deliver steam of the quantity and quality required by the power block.
- A 30 MW net conventional power block. This includes a single-reheat steam turbine and a 4 pole air/water cooled generator. Rated steam conditions are 500/430 °C and 120/30 bar. Other power block equipment includes a surface condenser and a circulating water condenser cooling system, feedwater heaters, deaerator and boiler feed pumps.
- Mechanical draft cooling tower with variable speed fans to allow both power and noise reduction during critical periods.
- A 30 MW dual fuel, quick response boiler. This has the capability to supply the full generation capacity and to operate at low and variable loads to supplement the solar boiler. The primary fuel is coal seam gas with light fuel oil available as the auxiliary fuel.
- A packaged water treatment plant capable of supplying demineralised water for the solar and gas boilers, to meet the required steam conditions of the steam turbine.
- Distributed control system that provides all control, protection, monitoring and alarming to allow the plant to be safely operated and maintained.
- Electrics including medium voltage switchgear, generator transformer and other systems.
