Behavior in this view is embedded within what is essentially a dynamic system of relations extending deep within individuals. Thorough and engaging, this handbook explores the impact of this research on what is now known about psychological development from birth to biological maturity, and it highlights the extent to which the most cutting-edge developmental science reflects a new kind of intellectual synthesis, one that reveals how cultural, social, cognitive, neural, and molecular processes work together to yield human behavior and changes in human behavior. With insightful contributions from more than 50 of the world's leading developmental scientists, these two volumes will serve as an influential and informed text for students and as an authoritative desk reference for years to come. *Speaking Across the Curriculum*, 2004 Speaking Across the Curriculum gives teachers ready-made speaking and listening activities that can be infused into any curriculum. Watson, 1989-04-11 Convinced that public speaking fears outranked all other fears, the authors combined their years of teaching novice speakers to set forth their techniques for reducing apprehension and sharpening communication performance skills. The three basic techniques stressed are cognitive structuring or attitude change, relaxation techniques, and skills training. All of the topics addressed herein are intended for students in basic speech communication classes. Some of the topics are the process of communication, assessing yourself as a communicator, improving attitudes, and reducing apprehension, preparing and delivering a public speech, improving skills in group discussions, as well as in all types of social relationships.
