Piliptchouk,2004-05-27 This document reviews security features of two most popular modern development platforms Java and NET Java v1 4 2 J2EE v1 4 and NET v1 1 The platform choice is not random because they represent to a certain extent competition between UNIX like and Windows systems which largely defined software evolution over the last decade Although Java applications run on Windows and there exist UNIX bridges for NET the Java UNIX and NET Windows combinations are used for development of a significant portion if not majority of applications on their respective operating systems so both platforms deserve a careful examination of their capabilities Such an examination is especially important since different aspects of UNIX Windows and Java NET competition have been flaming endless heated debates between proponents of both camps which often blindly deny merits of the opposite side while at the same time praising their preferred solution The material here is purposely structured by general categories of protection mechanism and reviewing each platform B G Bs features in those areas This allows starting each topic with a platform neutral security concept and performing relatively deep drill downs for each technology without losing track of the overall focus of providing an unbiased side by side comparison The document is based on the research material that was used as a foundation of the feature article Securing NET and Enterprise Java Side by Side which was written by Vincent Dovydaitis and myself and appeared in Numbers 3 4 of Computer Security Journal in 2002 The following areas will be considered Security Configuration and Code Containment Cryptography and Communication Code Protection and Code Access Security or CAS Authentication and User Access Security or UAS *Artificial Intelligence Research and Development* Isabel Aguiló,Llorenc Valverde,M. Parallel Processing Luc Bougé,Martti Forsell,Jesper Larsson Träff,Achim Streit,Wolfgang Ziegler,Michael

Alexander,Stephen Childs,2008-03-08 Parallelanddistributedprocessing althoughwithinthefocusofcomputerscience

research for a long time is gaining more and more importance in a wide spectrum of applications. These proceedings aim to demonstrate the use of parallel and distributed processing concepts in different application fields and attempt to spark interest in novel research directions to advance the embracing model of high performance computing research in general. The objective of these workshops is to specifically address researchers coming from university, industry and governmental research organizations and application oriented companies in order to close the gap between purely scientific research and the applicability of the research ideas to real life problems. Euro Par is an annual series of international conferences dedicated to the promotion and advancement of all aspects of parallel and distributed computing. The 2007 event was the 13th issue of the conference. Euro Par has for a long time been eager to attract colocated events sharing the same goal of promoting the development of parallel and distributed computing both as an industrial technique and an academic discipline, extending the frontier of both the state of the art and the state of the practice. Since 2006 Euro Par offers researchers the chance to colocate advanced technical workshops back to back with the main conference. This is for a mutual benefit: the workshops can take advantage of all technical and social facilities which are set up for the conference so that the organizational tasks are kept to a minimal level; the conference can rely on workshops to experiment with specific areas of research which are not yet mature enough or too specific to lead to an official full edged topic at the conference.

Reduce Risk and Improve Security on IBM

Mainframes: Volume 2 Mainframe Communication and Networking Security Axel Buecker, Thomas Cosenza, Uma Kumaraguru, Christopher Meyer, Vinicius Oliveira, Vinodkumar Ramalingam, Jan Thielmann, Joe Welsh, IBM Redbooks, 2015-09-25. This IBM Redbooks publication documents the strength and value of the IBM security strategy with IBM z Systems hardware and software referred to in this book by the previous product name IBM System z. In an age of increasing security consciousness and more dangerous and advanced persistent threats, System z provides the capabilities to address today's business security challenges. This book explores how System z hardware is designed to provide integrity, process isolation and cryptographic capability to help address security requirements. We highlight the features of IBM z OS and other operating systems that offer a variety of customizable security elements. We also describe z OS and other operating systems and additional software that use the building blocks of System z hardware to meet business security needs. We explore these from the perspective of an enterprise security architect and how a modern mainframe must fit into an enterprise security architecture. This book is part of a three volume series that focuses on guiding principles for optimized mainframe security configuration within a holistic enterprise security architecture. The intended audience includes enterprise security architects, planners and managers who are interested in exploring how the security design and features of the System z platform, the z OS operating system and associated software address current issues such as data encryption, authentication, authorization, network security, auditing, ease of security administration and monitoring.
