For example, the following table shows the results of a regression analysis of the relationship between the number of hours worked per week and the number of hours of sleep per night. The regression equation is $\hat{y} = 0.001x + 7.5$, where $\hat{y}$ is the predicted number of hours of sleep per night and x is the number of hours worked per week. The coefficient of determination is $R^2 = 0.0001$, which indicates that the model explains only 0.01% of the variation in the number of hours of sleep per night.

Finite Element Method for Engineers From Theory to Practice while emphasizing problems in solid mechanics with numerous examples explains the theory in four fundamental steps with a flow chart to develop equations for the finite element models and the associated computer programs The theory is presented using energy principles in solid mechanics and towards the end the methodology is explained using the weak form of the Galerkin method so that the method can be used to solve flow problems and even some differential equations

KEY FEATURES With basic knowledge of strength of materials self learn the finite element method Simple subroutines given from which a beginner can write codes in a suitable computer language One can write own finite element computer codes with the information provided

Finite Element Methods Darrell W. Pepper, Juan C. Heinrich, 1992-02 Deals with the fundamentals of the finite element method Beginning with the concept of one dimensional heat transfer the book progresses through two dimensional elements and ultimately ends with a discussion on three dimensional elements Each chapter contains a set of example problems and exercises Overall the book is useful in describing how to develop and utilize finite element methodology to numerically solve problems
