[Romance Linguistics 2009](#) Sonia Colina, Antxon Olarrea, Ana Maria Carvalho, 2010-11-25 This volume contains a selection of twenty-four peer-reviewed papers from the 39th annual Linguistic Symposium on Romance Languages LSRL held at the University of Arizona in 2009. Contributions cover a wide variety of topics in the areas of phonology, phonetics, syntax, morphology and diachronic Romance linguistics with an emphasis on language variation and change. Among the languages and varieties of Romance analyzed are Spanish, French, Italian, Portuguese, Romanian, Catalan, Old French, Old Occitan and Hispano-Romance. The research in this volume points to a cohesiveness in Romance linguistics that lies in the integration of up-to-date linguistic research with a comparative tradition and the in-depth study of a language family. The work presented will be of interest to scholars of Romance linguistics and of linguistics alike.

Sound perception and production in a foreign language Nimz, Katharina, 2016-04-13 The present study addresses the question of how German vowels are perceived and produced by Polish learners of German as a Foreign Language. It comprises three main experiments: a discrimination experiment, a production experiment and an identification experiment. With the exception of the discrimination task, the experiments further investigated the influence of orthographic marking on the perception and production of German vowel length. It was assumed that explicit markings such as the Dehnungs h (lengthening h) could help Polish GFL learners in perceiving and producing German words more correctly. The discrimination experiment with manipulated nonce words showed that Polish GFL learners detect pure length differences in German vowels less accurately than German native speakers, while this was not the case for pure quality differences. The results of the identification experiment contrast with the results of the discrimination task in that Polish GFL learners were better at judging incorrect vowel length than incorrect vowel quality in manipulated real words. However, orthographic marking did not turn out to be the driving factor, and it is suggested that metalinguistic awareness can explain the asymmetry between the two perception experiments. The production experiment supported the results of the identification task in that lengthening h did not help Polish learners in producing German vowel length more correctly. Yet as far as vowel quality productions are concerned, it is argued that orthography does influence L2 sound productions because Polish learners seem to be negatively influenced by their native grapheme-to-phoneme correspondences. It is concluded that it is important to differentiate between the influence of the L1 and L2 orthographic systems. On the one hand, the investigation of the influence of orthographic vowel length markers in German suggests that Polish GFL learners do not make use of length information provided by the L2 orthographic system. On the

other hand the vowel quality data suggest that the L1 orthographic system plays a crucial role in the acquisition of a foreign language It is therefore proposed that orthography influences the acquisition of foreign sounds but not in the way it was originally assumed

Phonology in the Bilingual and Bidialectal Lexicon Isabelle Darcy, Annie Tremblay, Miquel Simonet, 2017-07-06 A conversation between two people can only take place if the words intended by each speaker are successfully recognized Spoken word recognition is at the heart of language comprehension This automatic and smooth process remains a challenge for models of spoken word recognition Both the process of mapping the speech signal onto stored representations for words and the format of the representation themselves are subject to debate So far existing research on the nature of spoken word representations has focused mainly on native speakers The picture becomes even more complex when looking at spoken word recognition in a second language Given that most of the world's speakers know and use more than one language it is crucial to reach a more precise understanding of how bilingual and multilingual individuals encode spoken words in the mental lexicon and why spoken word recognition is more difficult in a second language than in the native language Current models of native spoken word recognition operate under two assumptions i that listeners perception of the incoming speech signal is optimal and ii that listeners lexical representations are accurate As a result lexical representations are easily activated and intended words are successfully recognized However these assumptions are compromised when applied to a later learned second language For a variety of reasons e.g phonetic phonological orthographic second language users may not perceive the speech signal optimally and they may still be refining the motor routines needed for articulation Accordingly their lexical representations may differ from those of native speakers which may in turn inhibit their selection of the intended word forms Second language users also have to solve a larger selection challenge having words in more than one language to choose from Thus for second language users the links between perception lexical representations orthography and production are all but clear Even for simultaneous bilinguals important questions remain about the specificity and interdependence of their lexical representations and the factors influencing cross language word activation This Frontiers Research Topic seeks to further our understanding of the factors that determine how multilinguals recognize and encode spoken words in the mental lexicon with a focus on the mapping between the input and lexical representations and on the quality of lexical representations Bioacoustics, 2005

Duetting and Turn-Taking Patterns of Singing Mammals: From Genes to Vocal Plasticity, and Beyond Patrice Adret, Dena Jane Clink, Charles T. Snowdon, Sofya Dolotovskaya, 2023-10-23 Mammalian vocal duets and turn taking exchanges long coordinated acoustic signals exchanged between two individuals are primarily found in family living pair bonded mammals with a socially monogamous lifestyle some rodents some lemurs tarsiers titi monkeys a Mentawai langur gibbons and siamangs Duetting and turn taking patterns combine visual chemical tactile and auditory cues to produce some of the most exuberant displays in the realm of animal communication How and why such phenotypes evolved independently across main

lineages are fundamental questions at the core of the nature nurture debate Duetting styles ranging from antiphonal non overlapping to simultaneous overlapping emissions have now been documented in various taxa some of which are quite reminiscent of turn taking rules in human conversation Nonetheless much remains to be learned about this complex motor skill and at all four levels of analysis namely 1 developmental processes 2 causal mechanisms 3 functional properties and 4 evolutionary history Given the strong link between this form of coordinated singing and pair bonding gaining a deeper understanding of this kind of cooperative behavior will likely shed more light on the deep evolutionary roots of human culture language and music

Recent Research in Second Language Phonetics/Phonology Barbara O. Baptista, Andreia S. Rauber, Michael A. Watkins, 2009-10-02 Recent Research in Second Language Phonetics Phonology Perception and Production reports the findings of seventeen interphonology studies on perception production of sounds by different first language speakers All the papers describe careful empirical research and as such will be of great interest to anyone working or intending to work in the specific field of second language phonological acquisition However given that speech production and perception are highly complex skills the research findings in this volume will also be relevant to those with a broader interest in language learning or cognition in general

Lingüística del castellano chileno / Chilean Spanish
Linguistics Brandon M. A. Rogers, Mauricio A. Figueroa Candia, 2021-09-07 Ya desde el siglo XIX el castellano chileno generó interés en lingüistas como Lenz 1891 quien lo aclamó como un geolecto dinámico y en constante evolución Más recientemente un grupo importante de lingüistas contemporáneos ha indicado que existe una gran cantidad de diferencias entre el castellano de Chile y otras variedades en varios frentes lingüísticos tanto es así que debe considerarse como una zona dialectal independiente en el mundo hispanohablante Su interés como caso práctico se ve reforzado por la incongruencia del grado particularmente alto de variación social y el menor grado de su variación geográfica Lingüística del castellano chileno Estudios sobre variación innovación contacto e identidad es el primer volumen de su tipo y reúne el trabajo de un grupo diverso e internacional de investigadores e investigadoras del castellano de Chile Mediante el uso de múltiples teorizaciones y análisis lingüísticos actuales este volumen examina cómo el uso la variación las actitudes la identidad y el cambio lingüístico se manifiestan de manera única en diferentes aspectos del castellano chileno y sus hablantes Este volumen que acerca el trabajo más actual sobre la lingüística española de Chile a la vanguardia del campo constituye un recurso valioso para aquellos involucrados en la investigación y la enseñanza de la lingüística la variación y el cambio lingüístico del castellano así como para estudiantes de grado y posgrado As early as the 19th century Chilean Spanish attracted the interest of linguists such as Lenz 1891 who hailed it as an evolving and vibrant variety In more recent times a number of contemporary linguists have indicated that such a variety of differences exist between Chilean Spanish and other varieties on a number of linguistic fronts that it should be considered as an independent dialectal zone in the Spanish speaking world Its interest as a case study is reinforced further by the incongruence of the particularly high degree of social variation and the small degree of
