Food Authentication Raúl González-Domínguez,2020-04-15 Multiple factors can directly influence the chemical composition of foods and consequently their organoleptic nutritional and bioactive properties including their geographical origin the variety or breed as well as the conditions of cultivation breeding and or feeding among others Therefore there is a great interest in the development of accurate robust and high throughput analytical methods to guarantee the authenticity and traceability of foods For these purposes a large number of sensorial physical and

chemical approaches can be used which must be normally combined with advanced statistical tools In this vein the aim of the Special Issue Food Authentication Techniques Trends and Emerging Approaches is to gather original research papers and review articles focused on the development and application of analytical techniques and emerging approaches in food authentication This Special Issue comprises 12 valuable scientific contributions including one review article and 11 original research works dealing with the authentication of foods with great commercial value such as olive oil Iberian ham and fruits among others

Emerging Infectious Diseases ,2012 Cumulated Index Medicus ,1996 **RNA'Protein Interaction Protocols** Susan R. Haynes,2008-02-03

The molecular characterization of RNA and its interactions with proteins is an important and exciting area of current research Organisms utilize a variety of RNA protein interactions to regulate the expression of their genes This is particularly true for eukaryotes since newly synthesized messenger RNA must be extensively modified and transported to the cytoplasm before it can be used for protein synthesis The realization that posttranscriptional processes are critical components of gene regulation has sparked an explosion of interest in both stable ribonucleoprotein RNP complexes and transient RNA protein interactions RNA is conformationally flexible and can adopt complex structures that provide diverse surfaces for interactions with proteins The fact that short RNA molecules aptamers see Chapter 16 can be selected to bind many different types of molecules is evidence of the structural variability of RNA RNA molecules are rarely entirely single or double stranded but usually contain multiple short duplexes interrupted by single stranded loops and bulges in some RNAs such as tRNAs the short duplexes stack on each other Further variability is generated by the presence of non Watson Crick base pairs modified nucleotides and more complex structures such as pseudoknots and triple strand interactions
