Gas Turbine Powerhouse Dietrich Eckardt, 2014-06-23 This book tells the story of the power generation gas turbine from the perspective of one of the leading companies in the field over a period of nearly 100 years written by an engineer Especially in times of imminent global economic crises it appears to be worthwhile to reflect on real economic values based on engineering ingenuity and enduring management of technological leadership Though the book is primarily designed as a technical history of the BBC ABB Alstom power generation gas turbines its scope is sufficiently broad to cover general development trends including parallel competitor activities A special benefit is the historical breakdown to the gas turbine component level so that the book actually outlines the development of axial compressors from early beginnings the progress in combustion technology towards extraordinary low emission values and that of axial turbines with special emphasis on early turbine cooling innovations The sheer length of certain engineering developments over several decades allows interesting historic observations and deductions on inherent business mechanisms the effects of technology preparations and organisational consequences A look into the mirror of the past provides revelations on the impact of far reaching business decisions 2017 Winner of the Historian Engineer Award of the ASME American Society of Mechanical Engineers

**Cost-Efficient Design** Klaus Ehrlenspiel,Alfons Kiewert,Udo Lindemann,2007-08-18 This translation has been developed from the fifth edition 2005 of the Authors German text Kosteng nstig Entwickeln und Konstruieren The discussion on the methods of cost reduction and cost driven design draw heavily on the S thematic Method of Design the development of which is described in German language literature of the past several decades An English language edition 1 Pah05 of a classic text is available In this approach the design process is vided into the phases of task clarification concept development preliminary sign embodiment and the detailed layout Design forms the core of the co dinated process of modern product development known under the rubric of Concurrent Engineering This book stresses the collaboration of the different partments in a company which is essential for the development of reliable and low cost products The first edition was a best seller for a number of years Eventually as the fields developed a second edition came out in 1998 The development of methods a major portion of that from the research in the authors Institute as well as the demand for the book led to the third fourth and fifth editions appearing in quick succession It was the first book that with a scientific approach showed the c nection between design production processes and the product costs This provided the basis for cost driven product design The overriding goal in preparing this translation was to convey the ideas of the authors as closely as possible     *Managing Global Innovation* Roman Boutellier,Oliver Gassmann,Maximilian von Zedtwitz,2013-06-29 Globalization has changed the face of R D Local knowledge clusters are not only tapped by multinationals but increasingly by small and medium sized companies as well Global R D networks speed up the evolution of technology and ask for new management concepts Modern communication technologies create the global village but customers become more fastidious and request their own specific products well

localized well tuned into their present business Integrated technology is required to cope with these needs The danger of over engineering has never been as great as today The question is frequently not whether some new features are technically feasible but whether customers are willing to accept and pay for it The first edition of Managing Global Innovation was sold out after few months clearly indicating the search for solutions to these challenges This second edition has been revised for clarity and actuality We have taken care to work in recent research findings as well as updating the case studies where appropriate This book is based on the growing importance of industrial global innovation and the lack of concepts to manage it For this book we conducted 320 interviews in 40 technology based highly internationalized companies including additional interviews in 1998 and 1999 for the second edition Our interview partners were R D managers and research directors from companies in Europe USA and Japan
