Psychology Ann Hollier,Maria I. Lasaga,A. C. Lasaga,1991

On the Psychobiology of Personality Robert M Stelmack,2004-11-12 Zuckerman received his Ph D in psychology from New York University Graduate School of Arts and Science in 1954 with a specialization in clinical psychology After graduation he worked for three years as a clinical psychologist in state hospitals in Norwich Connecticut and Indianapolis Indiana While in the latter position the Institute for Psychiatric Research was opened in the same medical center where he was working as a clinical psychologist He obtained a position there with a joint appointment in the department of psychiatry This was his first interdisciplinary experience with other researchers in psychiatry biochemistry psychopharmacology and psychology His first research areas were personality assessment and the relation between parental attitudes and psychopathology During this time he developed the first real trait state test for affects starting with the Affect Adjective Check List for anxiety and then broadening it to a three factor

trait state test including anxiety depression and hostility Multiple Affect Adjective Check List Later positive affect scales were added Toward the end of his years at the institute the first reports of the effects of sensory deprivation appeared and he began his own experiments in this field These experiments supported by grants from NIMH occupied him for the next 10 years during his time at Brooklyn College Adelphi University and the research labs at Albert Einstein Medical Center in Philadelphia This last job was his second interdisciplinary experience working in close collaboration with Harold Persky who added measures of hormonal changes to the sensory deprivation experiments He collaborated with Persky in studies of hormonal changes during experimentally hypnotically induced emotions During his time at Einstein he established relationships with other principal investigators in the area of sensory deprivation and they collaborated on the book Sensory Deprivation 15 years of research edited by John Zubek 1969 His chapter on theoretical constructs contained the idea of using individual differences in optimal levels of stimulation and arousal as an explanation for some of the variations in response to sensory deprivation The first sensation seeking scale SSS had been developed in the early 1960 s based on these constructs At the time of his move to the University of Delaware in 1969 he turned his full attention to the SSS as the operational measure of the optimal level constructs This was the time of the drug and sexual revolutions on and off campuses and research relating experience in these areas to the basic trait paid off and is continuing to this day in many laboratories Two books have been written on this topic Sensation Seeking Beyond the Optimal Level of Arousal 1979 Behavioral Expressions and Biosocial Bases of Sensation Seeking 1994 Research on sensation seeking in America and countries around the world continues at an unabated level of journal articles several hundred appearing since the 1994 book on the subject

Developmental Psychobiology Elliott M. Blass, 2012-12-06 ELLIOTT M BLASS Fifteen years have passed since the first volume on developmental psychobiology Blass 1986 appeared in this series and 13 since the publication of the second volume Blass 1988 These volumes documented the status of the broad domain of scientific inquiry called developmental psychobiology and were also written with an eye to the future The future has been revolutionary in at least three ways First there was the demise of a descriptive ethology as we had known it to be replaced first by sociobiology and later by its more sophisticated versions based on quantitative predictions of social interactions that reflected relatedness and inclusive fitness Second there was the emergence of cognitive science including cognitive development as an enormously strong and interactive multidisciplinary effort Making the functional brain more accessible made this revolution all the more relevant to our discipline In the laboratory immunocytochemical detection of immediate early genes such as *c-fos* now allows us to trace neuronal circuits activated during complex behaviors The functional brain of primates especially humans was also made very accessible through neuroimaging with which we can look at and into brains as they solve and attempt to solve particular tasks Those of us who were trained in neurology as graduate students two or three decades ago recognize only the people in white coats and patients in beds or on gurneys when we visit neurological units today The rest is essentially new

Developmental Psychobiology George F. Michel, Celia L. Moore, 1995 This text is the first to provide a coherent theoretical treatment of the flourishing new field of developmental psychobiology which has arisen in recent years on the crest of exciting advances in evolutionary biology developmental neuroscience and dynamic systems theory Michel and Moore two of the field's key pioneers and researchers integrate primary source information from research in both biological and psychological disciplines in a clear account of the frontier of biopsychological investigation and theorizing Explicitly conceptual and historical the first three chapters set the stage for a clear understanding of the field and its research with particular attention to the nature nurture question The next three chapters each provide information about a basic subfield in biology genetics evolution embryology that is particularly relevant for developmental studies of behavior These are followed by extended treatments of three spheres of inquiry behavioral embryology cognitive neuroscience animal behavior in terms of how a successful interdisciplinary approach to behavioral development might look A final chapter comments on some of the unique aspects of development study From this detailed and clearly organized text students will achieve a firm grasp of some of science's most fertile questions about the relation between evolution and development the relation between brain and cognitive development the value of a natural history approach to animal behavior and what it teaches us about humans and much more Each chapter contains material that questions the conventional wisdom held in many subdisciplines of biology and psychology Throughout the text challenges students to think creatively as it thoroughly grounds them in the field's approach to such topics as behavioral genetic analysis the concept of innateness molecular genetics and development neuroembryology behavioral embryology maturation cognition and ethology A Bradford Book

Cunningham, Ph.D., 2021-12-28 Introduction to Transpersonal Psychology Bridging Spirit and Science provides an accessible and engaging introduction to this complex and evolving field Adopting a modular approach the book systematically relates key themes of Transpersonal Psychology to three major areas within psychology general psychology experimental psychology and clinical psychology Covering a wide range of topics including transpersonal states of consciousness biological foundations research methods and cognition the book also features extensive discussion of transpersonal theorists and the impact of their work on our understanding of psychological concepts The book also introduces contemporary developments in the field and anticipates future advances such as feminist perspectives and cross cultural approaches alongside practical experiments designed to give transpersonal theories and concepts psychological roots A critical evaluation of both mainstream and transpersonal theories and research is applied throughout to foster analytical skills and encourage critical and scientific thinking about humanity's nature as spiritual creatures and ways to educate for personal and social transformation Accompanied by an online instructor's manual this book will be an essential companion for all students of Transpersonal or Humanistic Psychology or those interested in applying transpersonal ideas to mainstream psychological research

Handbook of Psychology, Research Methods in Psychology Irving B. Weiner, John A.

Schinka, Wayne F. Velicer, 2012-10-16 Psychology is of interest to academics from many fields as well as to the thousands of academic and clinical psychologists and general public who can't help but be interested in learning more about why humans think and behave as they do. This award-winning twelve-volume reference covers every aspect of the ever-fascinating discipline of psychology and represents the most current knowledge in the field. This ten-year revision now covers discoveries based in neuroscience, clinical psychology's new interest in evidence-based practice and mindfulness, and new findings in social, developmental, and forensic psychology.

Primates in the Real World Georgina M. Montgomery, 2015-09-21 The opening of this vital new book centers on a series of graves memorializing baboons killed near Amboseli National Park in Kenya in 2009, a stark image that emphasizes both the close emotional connection between primate researchers and their subjects and the intensely human qualities of the animals. *Primates in the Real World* goes on to trace primatology's shift from short-term expeditions designed to help overcome centuries-old myths to the field's arrival as a recognized science sustained by a complex web of international collaborations. Considering a series of pivotal episodes spanning the twentieth century, Georgina Montgomery shows how individuals both within and outside of the scientific community gradually liberated themselves from primate folklore to create primate science. Achieved largely through a movement from the lab to the field as the primary site of observation, this development reflected an urgent and ultimately extremely productive reassessment of what constitutes natural behavior for primates. An important contribution to the history of science and of women's roles in science as well as to animal studies and the exploration of the animal-human boundary, Montgomery's engagingly written narrative provides the general reader with the most accessible overview to date of this enduringly fascinating field of study.

Understanding Psychology A. C. Lasaga, 1991-07 **Assessment & Treatment of Addictions** Antoni Gual, Pablo Barrio, Laia Miquel, 2021-01-19 Addiction in its various forms represents an enormous challenge to society. Worldwide it has been estimated that alcohol, tobacco, and illicit drugs were responsible for more than 10 million deaths. Anderson et al. (2018) with a higher impact in developed countries where substance use disorders have been identified as responsible for life expectancy reversals. Rehm et al. (2016) Societal and medical responses to the problem are far from optimal, but the appearance of new technologies offers room for improvement, and lots of new initiatives have been launched and developed. In this Special Issue, we will describe and discuss how these new tools are helping to improve the assessment and treatment of substance use disorders. We will cover a wide variety of novelties that are being applied to addiction: e-health, APPs, digital phenotyping, ecological momentary assessment, and interventions, wearable technology, computer-assisted tests, transcranial magnetic stimulation, and virtual reality are just some examples of developments in a field that promises to create a real revolution in the assessment and treatment of addictions.
