The Growing Gap in Life Expectancy by Income National Academies of Sciences, Engineering, and Medicine, Division on Engineering and Physical Sciences, Board on Mathematical Sciences and Their Applications, Division of Behavioral and Social Sciences and Education, Committee on Population, Committee on the Long-Run Macroeconomic Effects of the Aging U.S. Population--Phase II, 2015-09-17 The U S population is aging Social Security projections suggest that between 2013 and 2050 the population aged 65 and over will almost double from 45 million to 86 million One key driver of population aging is ongoing increases in life expectancy Average U S life expectancy was 67 years for males and 73 years for females five decades ago the averages are now 76 and 81 respectively It has long been the case that better educated higher income people enjoy longer life expectancies than less educated lower income people The causes include early life conditions behavioral factors such as nutrition exercise and smoking behaviors stress and access to health care services all of which can vary across education and income Our major entitlement programs Medicare Medicaid Social Security and Supplemental Security Income have come to deliver disproportionately larger lifetime benefits to higher income people because on average they are increasingly collecting those benefits over more years than others This report studies the impact the growing gap in life expectancy has on the present value of lifetime benefits that people with higher or lower earnings will receive from major entitlement programs The analysis presented in *The Growing Gap in Life Expectancy by Income* goes beyond an examination of the existing literature

by providing the first comprehensive estimates of how lifetime benefits are affected by the changing distribution of life expectancy. The report also explores from a lifetime benefit perspective how the growing gap in longevity affects traditional policy analyses of reforms to the nation's leading entitlement programs. This in-depth analysis of the economic impacts of the longevity gap will inform debate and assist decision makers, economists, and researchers.

Life Span Motor Development
Kathleen M. Haywood, Nancy Getchell, 2018-10-30

Please note: This text was replaced with a seventh edition. This version is available only for courses using the sixth edition and will be discontinued at the end of the semester.

Life Span Motor Development Sixth Edition With Web Study Guide uses the model of constraints in discussing reasons for changes in movement throughout the life span. Focusing on assessment more heavily than previous editions, this updated edition encourages students to examine how the interactions of the individual, environment, and task bring about changes in a person's movements. The principles of motor development are presented in an accessible manner so that even readers with minimal movement science background will comprehend the material. A key component of the sixth edition is an improved web study guide featuring revised lab activities and better functionality. New to this edition, lab activity record sheets and questions are available as fillable documents so that students can complete and submit them electronically, resulting in increased efficiency and reduced paperwork for instructors. In several labs, guided assessments teach students to observe video and categorize movements accurately. These assessments cue students to look at particular parts of the movement and guide students through questions, answers, and feedback. Then students are provided opportunities for unguided assessments via video clips or live observation, putting into practice what they have learned in the guided assessments. There are also over 100 new video clips in the web study guide, including a comprehensive video diary of the motor development milestones in the first nine months of a baby's life.

Life Span Motor Development Sixth Edition contains several other updates that are appealing to instructors and students alike. A new full-color interior provides for a more engaging presentation of the material. Updated research includes Generation R studies and connections to fitness and motor skills. An updated presentation package and image bank, plus a test package and chapter quizzes, are included. An instructor guide includes recommendations on using the lab activities in the web study guide, both in and out of class. Multiple learning exercises that were previously part of the web resource have been moved to the book to allow the video-rich lab activities to occupy students' learning time when they are online. As in past editions, students understand how maturational age and chronological age are distinct and how functional constraints affect motor skill development and learning. It also covers normal and abnormal developmental issues across the full life span, especially in the formative years. The text shows how the four components of physical fitness—cardiorespiratory endurance, strength, flexibility, and body composition—interact to affect a person's movements over the life span. It also describes how relevant social, cultural, psychosocial, and cognitive influences can affect a person's movements. Significant updates focus on assessment, including new figures that help to explain in detail the functional constraints approach to

assessment Life Span Motor Development Sixth Edition not only provides students with the observational skills necessary for assessing motor development but it also expertly ties the information to real life The text continues to emphasize the application of motor development concepts to the real world by beginning each chapter with an example of a common experience and then revisiting that experience at the end of the chapter allowing readers to apply the material to the example The book also retains the objectives running glossary and key points sidebars and application questions throughout each chapter Life Span Motor Development Sixth Edition encompasses the most current research in motor development It is enhanced with practical online resources for instructors and students making the concepts of motor development come alive The text gives students a solid foundation not only for beginning their studies in motor development but also for applying the concepts to real world situations

explanations of terms and methods as we use them. Importantly, the exercises and online workbooks allow you to test your skills and understanding as you go along.

English Language Learners and the New Standards Margaret Heritage, Aída Walqui, Robert Linquanti, 2020-01-15. In *English Language Learners and the New Standards*, three leading scholars present a clear vision and practical suggestions for helping teachers engage ELL students in simultaneously learning subject area content, analytical practices, and language. This process requires three important shifts in our perspective on language and language learning: from an individual activity to a socially engaged activity; from a linear process aimed at correctness and fluency to a developmental process focused on comprehension and communication; and from a separate area of instruction to an approach that embeds language development in subject area activities. In *English Language Learners and the New Standards*, the authors clarify the skills and knowledge teachers need to integrate content knowledge and language development. Show how teachers can integrate formative assessment in ongoing teaching and learning. Discuss key leverage points and stress points in using interim and summative assessments with ELLs. Provide classroom vignettes illustrating key practices. Finally, the authors explain the theories and research that underlie their vision and examine the role of policy in shaping pedagogy and assessment for ELL students.

Leave no child behind UNESCO, 2022-06-20. To leave no child behind, UNESCO developed the first global report of this scope on boys' disengagement from education, bringing together qualitative and quantitative evidence from over 140 countries. This report provides an overview of the global situation on boys' disengagement from and disadvantage in education. It identifies factors influencing boys' participation, progression, and learning outcomes in education. It also analyses responses by governments and partners and examines promising policies and programmes. Finally, it includes recommendations on how to engage boys with education and address disadvantage. While girls continue to face severe disadvantages and inequalities in education, the report shows that boys in many countries are at greater risk than girls of repeating grades, failing to complete different education levels, and having poorer learning outcomes in school. No less than 132

million boys of primary and secondary school age are out of school They urgently require support As this report shows supporting boys does not mean that girls lose out and vice versa Addressing boys disengagement not only benefits boys learning employment opportunities income and well being it is also highly beneficial for achieving gender equality and desirable economic social and health outcomes
