Big Data and High Performance Computing L. Grandinetti, G.R. Joubert, M. Kunze, 2015-10-20 Big Data has been much in the news in recent years and the advantages conferred by the collection and analysis of large datasets in fields such as marketing medicine and finance have led to claims that almost any real world problem could be solved if sufficient data were available This is of course a very simplistic view and the usefulness of collecting processing and storing large datasets must always be seen in terms of the communication processing and storage capabilities of the computing platforms available This book presents papers from the International Research Workshop Advanced High Performance Computing Systems held in Cetraro Italy in July 2014 The papers selected for publication here discuss fundamental aspects of the definition of Big Data as well as considerations from practice where complex datasets are collected processed and stored The concepts problems methodologies and solutions presented are of much more general applicability than may be suggested by the particular application areas considered As a result the book will be of interest to all those whose work involves the processing of very large data sets exascale computing and the emerging fields of data science *Handbook of Disaster Research* Havidán Rodríguez, William Donner, Joseph E. Trainor, 2017-11-16 This timely Handbook is based on the principle that disasters are social constructions and focuses on social science disaster research It provides an interdisciplinary approach to disasters with theoretical methodological and practical applications Attention is given to conceptual issues dealing with the concept disaster and to methodological issues relating to research on disasters These include Geographic Information Systems as a useful research tool and its implications for future research This seminal work is the first interdisciplinary collection of disaster research as it stands now while outlining how the field will continue to grow *Social Beings* Susan T. Fiske, 2018-08-14 It is a nearly universal truth that people need people humans have adapted to life with other humans and the interactions and relationships that result are the most relevant adaptation environment This book explores the core motives and goals that shape these interactions with others with the self and collectively as a group in other words Why do people do what they do A brief overview of the field s unifying themes belonging understanding controlling enhancing self and trusting gives way to a detailed exploration of the human condition as well as the techniques used to study and understand it By delving into the motivations behind attraction helping bias persuasion aggression and more this book helps students grasp the complex interplay of internal and external cues and influences that inform every interaction An emphasis on real world applications relates social psychology principles to everyday life and this latest revision has been updated with the most recent research and trends to provide an accurate picture of the state of the field Blending traditional topics with new developments in an informal readable style makes this the ideal text to ignite students deeper interest and full engagement with social psychology concepts Cumulative Index to Nursing Literature Cinahl Information Systems Staff, 1999
