

Description of Operation

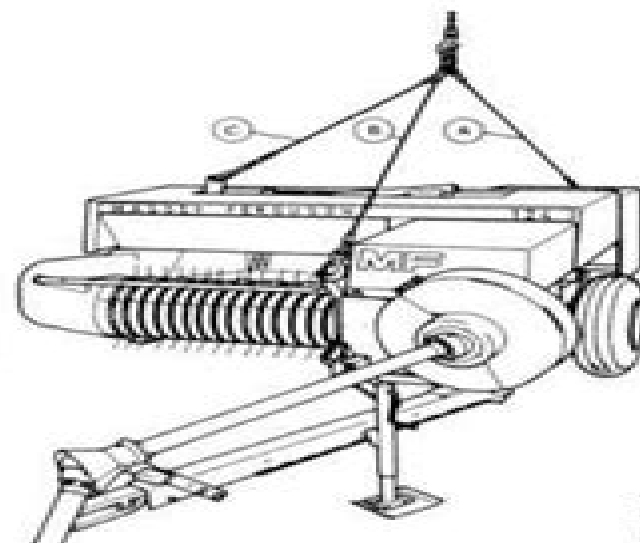

On medium density MF 120-124 and 126 balers, drive is transmitted from the p.t.o. to a hypoid gearbox—through a two-stage shaft with three universal joints on the MF 124 and MF 126, and through a single-stage shaft with two universal joints on the MF 120. The plunger is moved in a straight line by a connecting rod, driven by a crank. It must move at a rate of between 80 and 90 strokes per minute, which corresponds to a p.t.o. speed of 540 to 610 rev/min. The pick-up is adjustable for height and is fitted with an overrun clutch (MF 124 and 126 only) which prevents the tines from rotating backwards when the direction of flywheel rotation is reversed to clear a blockage. Four tie-bars on the MF 120, five on the MF 124 and six on the MF 126 carry the crops to the feed housing where two sets of three reciprocating packers on the MF 120 and MF 124, and three sets on the MF 126, then push it towards the bale chamber. The plunger, which is mounted on three rollers (MF 120-124) or four rollers (MF 126), cuts and compresses the crop held by the hay check.

Bale density can be adjusted by altering the tension on the rails at the end of the bale chamber. A hydraulic bale tensioning device is available as an accessory, which enables the bale density to be adjusted from the tractor seat. Bale length can be adjusted. A shaft fitted with a toothed wheel which penetrates the bale, moves the trip arm, by means of a knurled roller, and this arm, at the end of its stroke, trips the knoter shaft dog clutch. The needle cycle takes place and both knots are formed simultaneously.

The transmission is fitted with two safety devices: a slip clutch and a shear bolt. The latter secures the flywheel, which is driven by the transmission shaft, to the dog driving the hypoid gearbox input shaft. A third safety device consists of a shear bolt on the spring-loaded packer connecting rod.

Handling the baler

1. Three flat brackets, with holes drilled in them for attaching slings, are fitted at the factory; one at the front of the bale chamber, one at the back, and a third near the packers.
2. To lift the baler, use a hoist and three-section sling with a lifting capacity greater than the weight of the baler to be handled.
3. The lengths of the sling sections should be as follows:
A: 1800 mm, B: 1625 mm, C: 1320 mm.
Each cable or chain and hook should be capable of lifting 3 tonnes.
4. Baler weights:
MF 120: 1 330 Kg, MF 124: 1 480 Kg,
MF 126: 1 590 Kg.

Service Tools

In order to ensure efficient and quick servicing and repair work on these balers, the use of the following four service tools is strongly recommended:

- PR 001 - Tool for compressing and removing the packer con rod spring.
- PR 002 - Tool for adjusting the crownwheel shaft bearings pre-load.
- PR 003 - Tool for measuring the input shaft bearings pre-load.
- PR 004 - Tool for removing the bill hook needle.

These tools should be made up by MF Distributors and Dealers in accordance with the diagrams given in this manual.
