attend school is unaffected These results appear to be most heavily driven by males and by the older half of our youth sample We also find several mediating factors matter Land inheritance plays a much more pronounced role in predicting rural to urban permanent migration and nonagricultural sector employment in areas with less vibrant land markets and in relatively remote areas those far from major urban centers Overall the results reaffirm the notion that push factors dominate pull factors in dictating occupational and migration decisions in Ethiopia and highlight youth preferences to use migration or non agricultural employment as a last resort after exhausting other means of accessing land such as temporary land rental

Applications Katarzyna Chojnacka, Piotr Pawel Wieczorek, Grzegorz Schroeder, Izabela Michalak, 2018-07-09 This book is a compendium of knowledge on the useful properties of algae in the context of application as a useful component of innovative natural products. It presents all aspects of industrial applications of macroalgae biomass derived from the natural environment. Despite many interesting characteristics, algae are still regarded as undervalued raw material; therefore, present in the following chapters are not only environmental benefits arising from the development of excessive algal biomass but also the distribution and biology of algae in natural conditions in reservoirs, methods of obtaining extracts from biomass of algae for industrial purposes. Furthermore, it also includes topics such as the use of biomass and algae extracts for the industrial purposes in animal breeding and for agricultural purposes as well as the economic aspects of algae biomass harvesting for industrial purposes. The book is intended for a wide audience interested in new methods of obtaining the biomass from the natural environment for industrial purposes and the manufacture of products based on bioactive substances obtained from the environment.

Semantic IoT: Theory and Applications Rajiv Pandey, Marcin Paprzycki, Nidhi Srivastava, Subhash Bhalla, Katarzyna Wasielewska-Michniewska, 2021-04-12 This book is focused on an emerging area, i.e., a combination of IoT and semantic technologies which should enable breaking the silos of local and/or domain-specific IoT deployments. Taking into account the way that IoT ecosystems are realized, several challenges can be identified. Among them, of definite importance are:

- i How to provide common representation and/or shared understanding of data that will enable analysis across systematically growing ecosystems
- ii How to build ecosystems based on data flows
- iii How to track data provenance
- iv How to ensure/manage trust
- v How to search for things/data within ecosystems
- vi How to store data and assure its quality

Semantic technologies are often considered among the possible ways of addressing these and other related questions. More precisely, in academic research and in industrial practice, semantic technologies materialize in the following contexts; this list is also not exhaustive but indicates the breadth of scope of semantic technology usability:

- i representation of artefacts in IoT ecosystems and IoT networks
- ii providing interoperability between heterogeneous IoT artefacts
- iii representation of provenance information enabling provenance tracking, trust establishment, and quality assessment
- iv semantic search enabling flexible access to data originating in different places across the ecosystem
- v flexible storage of heterogeneous data

Finally, Semantic Web, Web of Things, and Linked Open Data are architectural paradigms with which the aforementioned solutions are to be integrated to provide production-ready deployments.
