Spectra of Symmetrized Shuffling Operators Victor Reiner,Franco Saliola,Volkmar Welker,2014-03-05 For a finite real reflection group W and a W orbit O of flats in its reflection arrangement or equivalently a conjugacy class of its parabolic

subgroups the authors introduce a statistic $\text{noninv } O$ on w in W that counts the number of O noninversions of w . This generalises the classical non inversion statistic for permutations w in the symmetric group S_n . The authors then study the operator O of right multiplication within the group algebra CW by the element that has $\text{noninv } O$ as its coefficient on w .

Measuring National Innovation Performance Frane Adam, 2013-10-09 This book provides a critical re examination of the Innovation Union Scoreboard IUS as the main tool used by the European Commission and other policy making bodies to measure national innovation capacity. Given that contemporary societies and economies are to a great extent characterised by the processes of production dissemination and application re combination of knowledge the accurate monitoring and measurement of R D efficiency and innovation performance on national regional and firm level are of outmost importance. The contextual reconstruction of the model of indicators used by IUS reveals that the accuracy and validity of measurement are not satisfactory and that substantial modifications of metrics are needed to achieve stronger theoretical significance and policy relevance. In this work the epistemic turn is emphasised and offered as an alternative namely in the sense of the shift from a mechanistic positivist orientation toward a more reflective and contextual post positivist approach.
