Benchmarking of deemed-to-satisfy provisions in standards fib Fédération

internationale du béton, 2015-05-01 Standards for specifying and ensuring the durability of new concrete structures are commonly of the prescriptive kind fib Bulletin 76 Benchmarking of deemed to satisfy provisions in standards Durability of reinforced concrete structures exposed to chlorides presents the benchmarking of a number of rules for chloride induced

corrosion as given in national codes such as European US and Australian standards This new benchmark determines the reliability ranges in the chloride induced depassivation of rebar if the deemed to satisfy rules of different countries are taken into consideration It does not only involve probabilistic calculations using input mainly based on short term and rapid laboratory test data but also involves input based on an independent assessment of existing structures The reliability analyses are carried out using the probabilistic design approach for chloride induced corrosion presented in fib Bulletin 34 Model Code for Service Life Design 2006 fib Model Code for Concrete Structures 2010 and ISO 16204 2012 The work compares the calculated reliability ranges thus determined with the target reliabilities proposed by current specifications and based on the comparison offers a proposal for the improvement of deemed to satisfy rules and specifications fib Bulletin 76 presents and discusses in detail the input data for the examined model parameters and offers an extensive annexe documenting the values of the individual parameters used in the analyses It thus provides a reliable database for the performance based probabilistic service life design of concrete structures exposed to chlorides be they in the form of salt fog sea water or de icing salts
