

Human Pedigree Analysis Problem Sheet

There are a number of different types of human pedigrees that you may encounter, however, there are only a few different modes of inheritance with which you will need to be familiar. The following pedigrees show you different examples of human traits that can be traced through generations. See if you can identify the modes of inheritance, and answer any questions directly related to each pedigree. While you are working on this, keep the following clues in mind:

Clues for Autosomal Inheritance	
Recessive - individual expressing trait has 2 normal parents - two affected parents can not have an unaffected child	Dominant - every affected person has at least one affected parent - each generation will have affected individuals
Clues for Sex-linked Inheritance	
Recessive - no father-to-son transmission - predominantly males affected - trait may skip generations	

1. For each of the pedigrees below, identify the mode of inheritance and provide at least 2 reasons for your choice.

Safety-I and Safety-II

Professor Erik Hollnagel, 2014-05-28 Safety has traditionally been defined as a condition where the number of adverse outcomes was as low as possible Safety I From a Safety I perspective the purpose of safety management is to make sure that the number of accidents and incidents is kept as low as possible or as low as is reasonably practicable This means that safety management must start from the manifestations of the absence of safety and that paradoxically safety is measured by counting the number of cases where it fails rather than by the number of cases where it succeeds This unavoidably leads to a reactive approach based on responding to what goes wrong or what is identified as a risk as something that could go wrong Focusing on what goes right rather than on what goes wrong changes the definition of safety from avoiding that something goes wrong to ensuring that everything goes right More precisely Safety II is the ability to succeed under varying conditions so that the number of intended and acceptable outcomes is as high as possible From a Safety II perspective the purpose of safety management is to ensure that as much as possible goes right in the sense that everyday work achieves its objectives This means that safety is managed by what it achieves successes things that go right and that likewise it is measured by counting the number of cases where things go right In order to do this safety management cannot only be reactive it must also be proactive But it must be proactive with regard to how actions succeed to everyday acceptable performance rather than with regard to how they can fail as traditional risk analysis does This book analyses and explains the principles behind both approaches and uses this to consider the past and future of safety management practices The analysis makes use of common examples and cases from domains such as aviation nuclear power production process management and health care The final chapters explain the theoretical and practical consequences of the new perspective on the level of day to day operations as well as on the level of strategic management safety culture Safety I and Safety II is written for all professionals responsible for their organisation s safety from strategic planning on the executive level to day to day operations in the field It presents the detailed and tested arguments for a transformation from protective to productive safety management
