nouvelles stratégies et de nouveaux business models basés sur les technologies digitales Training Engineers for Innovation

Denis Lemaître, 2018-12-18 Throughout history engineers have been defined as those who bring technological innovation to society. However, the concept of innovation and the role of the engineer are now changing as a result of globalization, the digital revolution, growing inequalities, and environmental concerns. Training Engineers for Innovation therefore analyzes the ways in which the educational systems for engineers are adapting to these new demands, as well as the conditions in which this training has developed. This book brings together the works of a consortium of researchers dedicated to the subject area as part of the Innov Ing 2020 project. Its contributors present various means to devise effective pedagogies adapted to a holistic approach to innovation which incorporates the technical, economic, social, ethical, and environmental dimensions of engineering.

Strategy Stewart R Clegg, Jochen Schweitzer, Andrea Whittle, Christos Pitelis, 2019-11-30 Providing a fresh perspective on strategy from an organizational perspective through a discursive approach featuring key theoretic tenets, this text is also pragmatic and emphasizes the practices of strategy to encourage the reader to be open to a wider set of ideas with a little more relevance and with a cooler attitude towards the affordances of the digital world and the possibilities for strategy's futures. The key areas of *Strategy* take a critical stance in the new edition and also include areas less evident in conventional strategy texts, such as not-for-profit organizations, process theories, globalization, organizational politics, and decision making, as well as the futures of strategy.

Environmental Innovation and Ecodesign Romain Debref, 2018-08-01 The end of the post-war economic boom was marked by the recognition of the environmental problem with the oil crises of the 1970s and in 1972 the first major UN conference devoted to the human environment. Successive international meetings have resulted in a context where technical change, innovation, and industry have assumed a central place in the creation of a new model of society. Against this consensus, the author demonstrates, from economic analysis and wide-ranging examples, that the environmental innovation doctrine and ecodesign methods remain fragile and can lead to paradoxical results.

Innovation, Collective Intelligence and Resiliency in Healthcare Organizations Aline Courie-Lemur, 2024-03-26 Resilience in healthcare organizations is a complex issue involving all stakeholders in the healthcare field. It is a highly topical issue, even more so in the wake of the recent health crisis. This book explores the impact of collective intelligence on the resilience of these organizations and the role played by innovation. Health organizations comprise the structures and systems involved in treating patients, as well as healthcare professionals with medical, social, or medico-social expertise, along with institutional and administrative players in the field. *Innovation, Collective Intelligence and Resiliency in Healthcare Organizations* alternates between theoretical readings and illustrative case studies. Their diversity is the result of their contributors: university researchers, institutional players from healthcare authorities, practicing caregivers in hospital structures, or healthcare coordination support systems and managers of healthcare structures and systems.

From Additive Manufacturing to 3D/4D Printing 2 Jean-Claude André, 2017-10-30 Additive manufacturing which was first invented in France and then applied in the United States is now 33 years old and represents a market of around 5 billion euros per year with annual growth of between 20 and 30%. Today additive manufacturing is experiencing a great amount of innovation in its processes, software, engineering and materials used. Its strength as a process has more recently allowed for the exploration of new niches ranging from applications at nanometer and decimeter scales to others in mechanics and health. As a result the limitations of the process have also begun to emerge which include the quality of the tools, their cost of manufacture, the multi-material aspects, functionalities and surface conditions. Volume 2 of this series presents the current techniques, improvements and limits of additive manufacturing providing an up-to-date review of this process.
