Programmable Devices and Systems 2001 W. Ciazynski, W. Ciężyński, Edward Hryniewicz, P. Kłosowski, 2002 Scientific meetings on programmable devices and systems began in 1995 with the PDS 95 event organised by the Institute of Electronics Silesian University of Technology SUT Many papers on the issues of programmable devices and systems were presented at numerous conferences and workshops devoted to electronics and circuit theory yet there were no workshops devoted solely to those particular topics Combined with the belief that some specific common problems appeared in the area of PDS justified the decision to organise the PDS meeting The PDS2001 IFAC Workshop organised by the Institute of Electronics SUT Gliwice Poland was the 5th event in the series The aim of the meeting was to define the future trends of this field via the interaction of industry technical research centres and academia representatives This Proceedings volume contains 54 duly presented papers and many of them when compared to the Preprints volume version have been corrected and enriched with the discussion results The papers are grouped according to the Workshop plenary sessions topics as follows

- Digital Signal Processing
- Industrial Programmable Logic Controllers
- Field Programmable Logic

Handbook of Software Solutions for ICME Georg J. Schmitz, Ulrich Prahl, 2016-12-19 As one of the results of an ambitious project this handbook provides a well structured directory of globally available software tools in the area of Integrated Computational Materials Engineering ICME The compilation covers models software tools and numerical methods allowing describing electronic atomistic and mesoscopic phenomena which in their combination determine the microstructure and the properties of materials It reaches out to simulations of component manufacture comprising primary shaping forming joining coating heat treatment and machining processes Models and tools addressing the in service behavior like fatigue corrosion and eventually recycling complete the compilation An introductory overview is provided for each of these different modelling areas highlighting the relevant phenomena and also discussing the current state for the different simulation approaches A must have for researchers application engineers and simulation software providers seeking a holistic overview about the current state of the art in a huge variety of modelling topics This handbook equally serves as a reference manual for academic and commercial software developers and providers for industrial users of simulation software and for decision makers seeking to optimize their production by simulations In view of its sound introductions into the different fields of materials physics materials chemistry materials engineering and materials processing it also serves as a tutorial for students in the emerging discipline of ICME which requires a broad view on things

and at least a basic education in adjacent fields **Principles of Adaptive Filters and Self-learning Systems** Anthony Zaknich, 2005-08-19 The topics of control engineering and signal processing continue to flourish and develop In common with general scientific investigation new ideas concepts and interpretations emerge quite spontaneously and these are then discussed used discarded or subsumed into the prevailing subject paradigm Sometimes these innovative concepts coalesce into a new sub discipline within the broad subject tapestry of control and signal processing This preliminary battle between old and new usually takes place at conferences through the Internet and in the journals of the discipline After a little more maturity has been acquired by the new concepts then archival publication as a scientific or engineering monograph may occur A new concept in control and signal processing is known to have arrived when sufficient material has evolved for the topic to be taught as a specialised tutorial workshop or as a course to undergraduate graduate or industrial engineers Advanced Textbooks in Control and Signal Processing are designed as a vehicle for the systematic presentation of course material for both popular and innovative topics in the discipline It is hoped that prospective authors will welcome the opportunity to publish a structured and systematic presentation of some of the newer emerging control and signal processing technologies in the textbook series
