Maran,Laurence A. Marschall,2009-02-10 The historical and social implications of the telescope and that instrument s modern day significance are brought into startling focus in this fascinating account When Galileo looked to the sky with his perspicillum or spyglass roughly 400 years ago he could not have fathomed the amount of change his astonishing findings a seemingly flat moon magically transformed into a dynamic crater filled orb and a large black sky suddenly held millions of galaxies would have on civilizations Reflecting on how Galileo s world compares with contemporary society this insightful analysis deftly moves from the cutting edge technology available in 17th century Europe to the unbelievable phenomena discovered during the last 50 years documenting important astronomical advances and the effects they have had over the years **Handbook for the Historiography of Science** Mauro L. Condé,Marlon Salomon,2023-09-30 This book aims to perform a critical and broad assessment of the historiography of science produced from the late nineteenth century to the early twenty first century It presents its main authors concepts ideas conceptions and schools It also analyzes the historical circumstances of the rise of the discipline history of science and the relations of the historiography of science with related areas These chapters do not understand the historiography of science as a mere description or record of the history of science Instead they understand the historiography

of science from the epistemological criteria and choices that guided the writing of the history of science in its different contexts In other words more than describing the record of the various possibilities of historiographical approaches to science the chapters carry out an epistemological reflection to assess the bases possibilities scope and limits of different historiographical conceptions authors and traditions that have established the writing of the history of science This book can be conceived as a reference work not only for professional historians and philosophers but also for academics from different backgrounds who are initiating themselves in the universe of history and philosophy of science be they scientists from different fields or young researchers from different backgrounds who want to start studying the history and philosophy of science *Monthly Catalog of United States Government Publications* United States.
