Global Software Dave Taylor,2012-12-06 John Sculley In the short history of personal computing the task of the software programmer has been one of the least recognized but one of the most significant in the industry In addition to defining the problems and presenting the solutions the software programmer is confronted with the challenge of having to predict what combination of ideas and technologies will move the industry forward in the most compelling way Even though we've seen the development of tremendous applications in a surprisingly short period of time the most difficult problems often surface when we try to elevate a successful local idea to the international arena In the case of Apple Computer these challenges become especially profound when you consider that Apple sells Macintosh not just in the United States but in Japan China the Middle East Africa Eastern Europe and even to the United Nations itself Of course this means that the personal computer must work everywhere around the world But more significantly it also means that the software must reflect the uniqueness of a given culture its language morals and even its sense of humor To step away from a narrowly defined nationally based paradigm for software development programmers management and entire corporations must learn to recognize what elements of an interface problem solving technique documentation illustration package design and advertisement are local and which elements are appropriate for global markets

Networks and Systems Management Iosif G. Ghetie,2012-12-06 The deployment of communications networks and distributed computing systems requires the use of open standards based integrated management systems During the last five years the overall industry effort to develop enhance and integrate management systems has crystallized in the concept of management platforms Management platforms are software systems which provide open multi vendor multiprotocol distributed management services They allow multiple management applications to run over core platform services which constitute the essential part of the management platform framework This book

provides a comprehensive analysis of the features and technical characteristics of distributed management platforms by examining both qualitative and quantitative management capabilities required by each management platform service. The analysis covers the management platform run time environment, the operational aspects of using management platforms, the development environment which consists of software toolkits that are used to build management applications, the implementation environment which deals with testing interoperability aspects of using management platforms, and of course the distributed applications services which platforms make available to management applications. Finally, the analysis covers the capabilities of several management applications, either generic or specific to devices or resources which run on top of management platforms.
