IGNEOUS ROCKS
(Write your answers in the spaces provided.)

Igneous rocks are formed from molten magma or lava. They are the most abundant type of rock in the Earth's crust. They are formed by the cooling and solidification of magma or lava. There are two main types of igneous rocks: intrusive and extrusive.

1. Intrusive
Intrusive igneous rocks are formed from magma that has cooled slowly underground. This allows large crystals to form. Examples of intrusive igneous rocks include granite and diorite.

2. Extrusive
Extrusive igneous rocks are formed from lava that has cooled quickly on the Earth's surface. This results in smaller crystals. Examples of extrusive igneous rocks include basalt and andesite.

3. Sedimentary
Sedimentary rocks are formed from the remains of plants and animals that have been buried and compressed over time. Examples of sedimentary rocks include sandstone and shale.
