Question 1

The student is learning the steps of the nursing process. What is the first thing that the student should realize about the purpose of this process?

1. Deliver care to a client in an organized way.
2. Implement a plan that is close to the medical model.
3. Identify client needs and deliver care to meet those needs.
4. Make sure that standardized care is available to clients.

Correct Answer: 3

Rationale 3: The purpose of the nursing process is to identify a clients health status and actual or potential health care problems or needs, to establish plans to meet the identified needs, and to deliver specific nursing interventions to meet those needs.

Question 2

While conducting a dressing change, the nurse notes a new area of skin breakdown that was caused from the tape used to secure the dressing. In which phase of the nursing process is the nurse working?

1. Assessment
2. Diagnosis
3. Implementation
4. Evaluation

Correct Answer: 1

Rationale 1: Assessment is the collection, organization, validation, and documentation of data. Assessment is carried throughout the nursing process, as in this case. Even though performing the dressing change is implementation, noticing the new skin breakdown is assessment.

Question 3

During an assessment, a client who is not very talkative appears pale, diaphoretic, and restless in the bed, and says leave me alone. Which subjective data should the nurse document?

1. Restlessness
2. Leave me alone
3. Not talkative
4. Pale and diaphoretic

Correct Answer: 2

Rationale 2: Subjective data can be described or verified only by that person and are apparent only to the person affected. Subjective data include the clients sensations, feelings, beliefs, attitudes, and perceptions of personal health status and life situations.

Question 4

Family of a client demonstrating confusion state that this is not the clients usual behavior. How should the nurse document this data?

1. Inference
2. Subjective data
