A large number of examples and end-of-chapter problems test the reader's understanding of the material. The 4th edition includes new and updated material on systems, noise, active devices, and circuits, power waves, transients, RF CMOS circuits, and more.

Nanotechnology in the Defense Industry Madhuri Sharon, Angelica S. L. Rodriguez, Chetna Sharon, Pio Sifuentes Gallardo, 2019-10-01. This book will be about various aspects related to applications and use of knowledge of nanotechnology in promoting defense activities. The area in which scientists are focusing includes nano devices such as sensors, GPS, computers, chemical/biological weapons, nano fabrics, bulletproof materials, nano stealth coating, use of nanotechnology in various areas of aerospace. It is intended to cover available methodologies and understanding of technologies for these applications. Not only for destructive but also to improve medical and casualty safety care for soldiers and to produce lightweight strong and multi-functional materials for use in body armor both for protection and to provide enhanced connectivity will be covered.

Space Antenna Handbook William A. Imbriale, Steven Shichang Gao, Luigi Boccia, 2012-06-25. This book addresses a broad range of topics on antennas for space applications. First, it introduces the fundamental methodologies of space antenna design, modelling, and analysis, as well as the state of the art and anticipated future technological developments. Each of the topics discussed are specialized and contextualized to the space sector. Furthermore, case studies are also provided to demonstrate the design and implementation of antennas in actual applications. Second, the authors present a detailed review of antenna designs for some popular applications such as satellite communications, space-borne synthetic aperture radar, SAR, Global Navigation Satellite Systems (GNSS) receivers, science instruments, radio astronomy, small satellites, and deep space applications. Finally, it presents the reader with a comprehensive path from space antenna development basics to specific individual applications.

Key Features: Presents a detailed review of antenna designs for applications such as satellite communications, space-borne SAR, GNSS receivers, science instruments, small satellites, radio astronomy, deep space applications. Addresses the space antenna development from different angles including electromagnetic, thermal, and mechanical design strategies required for space qualification. Includes numerous case studies to demonstrate how to design and implement antennas in practical scenarios. Offers both an introduction for students in the field and an in-depth reference for antenna engineers who develop space antennas. This book serves as an excellent reference for researchers, professionals, and graduate students in the fields of
