PRODUCT OVERVIEW

The N-TRON™ 308TX Industrial Network Switch is designed to solve the most demanding industrial communications requirements while providing high throughput and minimum downtime.

The 308TX provides eight RJ-45 auto-sensing 10/100BaseTX ports. All ports are full/half duplex capable, using "state of the art" Ethernet switching technology. The 308TX auto-negotiates the speed and flow control capabilities of all eight port connections, and configures itself automatically.

Since the 308TX is auto sensing, there will be no need to make extensive wiring changes if upgrades are made to the host computers, plant systems, or Ethernet I/O modules. The switching fabric simply scales up or down automatically to match your specific network environment.

The 308TX supports up to 4,000 MAC addresses, thus enabling these products to support extremely sophisticated and complex network architectures.

The N-TRON 308TX is an ideal candidate for upgrading existing hubs and repeaters to increase bandwidth and determinism by virtually eliminating network collisions. The product also keep the network affordable, while maintaining the plug & play simplicity of the unmanaged hub.

The 308TX can simplify plant wiring by eliminating the need to bring data acquisition and control network connections back

to a climate controlled environment. The 308TX has extended operating environmental specifications to meet the harsh needs of the industrial environment. For cost savings and convenience the 308TX can be DIN-Rail mounted alongside Ethernet I/O or other industrial equipment.

The unique compact size provides a smaller footprint, conserving space in the most critical dimension. In addition, as with other DIN-Rail devices, the 308TX can be panel mounted.

To increase reliability, the 308TX contains redundant power inputs. LEDs are provided to display the link status and activity of each port, as well as power on/off status.

N-VIEW OPC PORT MONITORING (With -N Option Only)

The N-TRON N-View OLE for Process Control (OPC) Server Software can be combined with popular HMI software packages to add network traffic monitoring, trending and alarming to any application using N-TRON switches configured with the N-View option. N-TRON's N-View OPC Server collects 41 different traffic variables per port and 5 system level variables per switch. This information can provide a complete overview of the network load, service quality, and packet traffic. OPC client software can use N-View OPC Server data to resolve network problems quickly and improve system reliability.
