Robot Localization and Map Building Hanafiah Yussof, 2010-03-01 Localization and mapping are the essence of successful navigation in mobile platform technology. Localization is a fundamental task in order to achieve high levels of autonomy in robot navigation and robustness in vehicle positioning. Robot localization and mapping is commonly related to cartography, combining science, technique, and computation to build a trajectory map that reality can be modelled in ways that communicate spatial information effectively. This book describes comprehensive introduction theories and applications related to localization, positioning, and map building in mobile robot and autonomous vehicle platforms. It is organized in twenty-seven chapters. Each chapter is rich with different degrees of details and approaches supported by unique and actual resources that make it possible for readers to explore and learn the up-to-date knowledge in robot navigation technology. Understanding the theory and principles described in this book requires a multidisciplinary background of robotics, nonlinear system, sensor network, network engineering, computer science, physics, etc. Applied Computer Sciences in Engineering Juan Carlos Figueroa-García, Juan G. Villegas, Juan Rafael Orozco-Arroyave, Pablo Andres Maya Duque, 2018-09-12 This two-volume set CCIS 915 and CCIS 916 constitutes the refereed proceedings of the 5th Workshop on Engineering Applications WEA 2018 held in Medellín, Colombia, in October 2018. The 41 revised full papers presented in this volume were carefully reviewed and selected from 101 submissions. The papers are organized in topical sections such as green logistics and optimization, Internet of Things, IoT, digital signal processing, DSP, network applications, miscellaneous applications.

Complete Course in Astrobiology Gerda Horneck, Petra Rettberg, 2008-06-25 This up-to-date resource is based on lectures developed by experts in the relevant fields and carefully edited by the leading astrobiologists within the European community. Aimed at graduate students in physics, astronomy, and biology and their lecturers, the text begins with a general introduction to astrobiology, followed by sections on basic prebiotic chemistry, extremophiles, and habitability in our solar system and beyond. A discussion of astrodynamics leads to a look at experimental facilities and instrumentation for space experiments and ultimately astrobiology missions, backed in each case by the latest research results from this fascinating field. Includes a CD-ROM with additional course material. *Cosmic Gamma-Ray Sources* Ka Lok Cheng, Gustavo E. Romero, 2004-10-25 Gamma-ray astronomy has undergone an enormous progress in the last 15 years. The success of satellite experiments like NASA's Compton Gamma Ray Observatory and ESA's INTEGRAL mission, as well as of ground-based instruments, have opened new views into the high-energy Universe. Different classes of cosmic gamma-ray sources have been now detected at different energies, in addition to young radio pulsars and gamma-ray bursts, the classical ones. The new sources include radio-quiet pulsars, microquasars, supernova remnants, starburst galaxies, radio galaxies, flat-spectrum radio quasars, and BL Lacertae objects. A large number of unidentified sources strongly suggests that this brief enumeration is far from complete. Gamma-ray bursts are now established as extragalactic sources with tremendous energy output. There is accumulating evidence

supporting the idea that massive stars and star forming regions can accelerate charged particles up to relativistic energies making them gamma ray sources Gamma ray astronomy has also proved to be a powerful tool for cosmology imposing constraints to the background photon fields that can absorb the gamma ray flux from distant sources All this has profound implications for our current ideas about how particles are accelerated and transported in both the local and distant Universe The evolution of our knowledge on the gamma ray sky has been so fast that is not easy for the non specialist scientist and the graduate student to be aware of the full potential of this field or to grasp the fundamentals of a given topic in order to attempt some original contribution

Computer Vision - ECCV 2004 Tomas Pajdla, Jiri Matas, 2004-05-12 Welcome to the proceedings of the 8th European Conference on Computer Vision Following a very successful ECCV 2002 the response to our call for papers was almost equally strong 555 papers were submitted We accepted 41 papers for oral and 149 papers for poster presentation Several innovations were introduced into the review process First the number of program committee members was increased to reduce their review load We managed to assign to program committee members no more than 12 papers Second we adopted a paper ranking system Program committee members were asked to rank all the papers assigned to them even those that were reviewed by additional reviewers Third we allowed authors to respond to the reviews consolidated in a discussion involving the area chair and the reviewers Fourth their reports and their responses were made available to the authors as well as to the program committee members Our aim was to provide the authors with maximal feedback and to let the program committee members know how authors reacted to their reviews and how their reviews were or were not reflected in the final decision Finally we reduced the length of reviewed papers from 15 to 12 pages The preparation of ECCV 2004 went smoothly thanks to the efforts of the organizing committee the area chairs the program committee and the reviewers We are indebted to Anders Heyden Mads Nielsen and Henrik J Nielsen for passing on ECCV traditions and to Dominique Asselineau from ENST TSI who kindly provided his GestRFIA conference software We thank Jan Olof Eklundh and Andrew Zisserman for encouraging us to organize ECCV 2004 in Prague

Protostars and Planets V Bo Reipurth, David Jewitt, Klaus Keil, 2007 Protostars and Planets V builds on the latest results from recent advances in ground and space based astronomy and in numerical computing techniques to offer the most detailed and up to date picture of star and planet formation including the formation and early evolution of our own solar system

The Multi-Messenger Approach to High-Energy Gamma-Ray Sources Josep M. Paredes, Olaf Reimer, Diego F. Torres, 2007-07-17 This book provides a theoretical and observational overview of the state of the art of gamma ray astrophysics and their impact and connection with the physics of cosmic rays and neutrinos With the aim of shedding new and fresh light on the problem of the nature of the gamma ray sources particularly those yet unidentified this book summarizes contributions to a workshop that continues with the series initiated by the meeting held at Tonantzintla in October 2000 and Hong Kong in May 2004
