power mode locked thin disk oscillator and to compress the pulses emitted from this laser to durations of only a few optical
cycles Moreover the monograph introduces several methods to achieve power scalability of compression and stabilization
techniques All experimental approaches are compared in detail and may serve as a guideline for developing high power
waveform controlled few cycle light sources which offer tremendous potential to exploit extreme nonlinear optical effects at
unprecedentedly high repetition rates and to establish table top infrared light sources with a unique combination of brilliance
and bandwidth As an example the realization of a multi Watt multi octave spanning mid infrared femtosecond source is
described The thesis starts with a basic introduction to the field of ultrafast laser oscillators It subsequently presents
additional details of previously published research results and establishes a connection between them It therefore addresses
both newcomers to and experts in the field of high power ultrafast laser development **MotorBoating** ,1970-08 *Flying
