Middleware 2000 Joseph Sventek, Geoffrey Coulson, 2003-06-29 Middleware is everywhere Ever since the advent of sockets and other virtual circuit abstractions researchers have been looking for ways to incorporate high value concepts into distributed systems platforms Most distributed applications especially Internet applications are now programmed using such middleware platforms Prior to 1998 there were several major conferences and workshops at which research into middleware was reported including ICODP International Conference on Open Distributed Processing ICDP International Conference on Distributed Platforms and SDNE Services in Distributed and Networked environments Middleware 98 was a synthesis of these three conferences Middleware 2000 continued the excellent tradition of Middleware 98 It provided a single venue for reporting state of the art results in the provision of distributed systems platforms The focus of Middleware 2000 was the design implementation deployment and evaluation of distributed systems platforms and architectures for future networked environments Among the 70 initial submissions to Middleware 2000 21 papers were selected for inclusion in the technical program of the conference Every paper was reviewed by four members of the program committee The papers were judged according to their originality presentation quality and relevance to the conference topics The accepted papers cover various subjects such as caching reflection quality of service and transactions

middleware solutions e.g application servers and Web services are very complex software products that are hard to tame because of intricacies of distributed systems Their functionalities have mostly been developed and managed with the help of administration tools and corresponding configuration files recently in XML Though this constitutes flexibility for developing and administrating a distributed application the conceptual model underlying the different configurations is only implicit To remedy such problems Semantic Management of Middleware contributes an ontology based approach to support the development and administration of middleware based applications The ontology is an explicit conceptual model with formal logic based semantics Its descriptions may therefore be queried may foresight required actions or may be checked to avoid inconsistent system configurations This book builds a rigorous approach towards giving the declarative descriptions of components and services a well defined meaning by specifying ontological foundations and by showing how such foundations may be realized in practical up and running systems
