

Genetics Practice Problems: Pedigree Tables

Remember the following when working pedigree tables:

- [I] Circles are females and squares are males.
- [II] A shaded circle or square indicates that a person has the trait.

The pedigree chart below is the inheritance of color blindness. Shaded individuals are colorblind. First, determine the probable genotype of person I - 1. Then answer the questions below the table.

What do you know about the genotype of the mother of I-1?

These parents (I-1 and an color blind man [I-2]) the had five children, but color blind males from his mother. Since the mother is not shaded she must be a carrier.

Number II individuals just like his father. Always males and it get his allele for color blindness.

Yes, color blind. Yes, alleles for color blindness. From his mother. Must. Because their 2 chromosomes. From their father.

Number numbers II and II were color blind. How many have color blindness [X^bY]

That mother with the carrier for color blindness.

What must be the genotype of the parents of a color blind daughter? Explain.

To have a color blind daughter, she must have the recessive alleles from each parent. Her father must be X^bY and mother must have to be X^bX^b.

If mother II has a normal son, what is the probability that their son will be color blind?

$X^B X^b \times X^B Y \rightarrow$ all of their sons will not be color blind.
