The Periodic Table I D. Michael P. Mingos, 2020-02-05 As 2019 has been declared the International Year of the Periodic Table it is appropriate that Structure and Bonding marks this anniversary with two special volumes In 1869 Dmitri Ivanovitch Mendeleev first proposed his periodic table of the elements He is given the major credit for proposing the conceptual framework used by chemists to systematically inter relate the chemical properties of the elements However the concept of periodicity evolved in distinct stages and was the culmination of work by other chemists over several decades For example Newland s Law of Octaves marked an important step in the evolution of the periodic system since it represented the first clear statement that the properties of the elements repeated after intervals of 8 Mendeleev s predictions demonstrated in an impressive manner how the periodic table could be used to predict the occurrence and properties of new elements Not all of his many predictions proved to be valid but the discovery of scandium gallium and germanium represented sufficient vindication of its utility and they cemented its enduring influence Mendeleev s periodic table was based on the atomic weights of the elements and it was another 50 years before Moseley established that it was the atomic number of the elements that was the fundamental parameter and this led to the prediction of further elements Some have suggested that the periodic table is one of the most fruitful ideas in modern science and that it is comparable to Darwin s theory of evolution by natural selection proposed at approximately the same time There is no doubt that the periodic table occupies a central position in chemistry In its modern form it is reproduced in most undergraduate inorganic textbooks and is present in almost every chemistry lecture room and classroom This first volume provides chemists with an account of the historical development of the Periodic Table and an overview of how the Periodic Table has evolved over the last 150 years It also illustrates how it has guided the research programmes of some distinguished chemists

Experimental Chemistry Robert J. Artz, 1982 *Nature of the Chemical Concept* Keith S Taber, 2019-04-29 The features of chemistry that make it such a fascinating and engaging subject to teach also contribute to it being a challenging subject for many learners Chemistry draws upon a wide range of abstract concepts which are embedded in a large body of theoretical knowledge As a science chemistry offers ideas that are the products of scientists creative imaginations and yet which are motivated and constrained by observations of natural phenomena Chemistry is often discussed and taught largely in terms of non observable theoretical entities such as molecules and electrons and orbitals which probably seem as familiar and real to a chemistry teacher as Bunsen burners and yet comprise a realm as alien and strange to many students as some learners own alternative conceptions misconceptions may appear to the teacher All chemistry teachers know that chemistry is a conceptual subject especially at the upper end of secondary school and at university level and that some students struggle to understand many chemical ideas This book offers a step by step analysis and discussion of just why some students find chemistry difficult by examining the nature of chemistry concepts and how they are communicated and learnt The book considers the idea of

concepts itself draws upon case studies of how canonical chemical concepts have developed explores how chemical concepts become represented in curriculum and in classroom teaching and discusses how conceptual learning and development occurs This book will be invaluable to anyone interested in teaching and learning and offers guidance to teachers looking to make sense of and respond to the challenges of teaching chemistry *The Nature of the Chemical Concept* Keith S Taber, 2019-04-29 This book offers a step by step analysis and discussion of just why some students find chemistry difficult by examining the nature of chemistry concepts and how they are communicated and learnt □□□□□□□□ □□□, 2005
