**Enhanced Learning and Teaching via Neuroscience** Lorna Uden,Gregory Siy Ching,Amy Corrinne Roberts,2023-11-15 Neuroscience contributes to the basic understanding of the neural mechanisms underlying human development and learning Educational neuroscience is an interdisciplinary research eld that seeks to translate research ndings on neural mechanisms of learning to educational practice and policy and to understand the effects of education on the brain It is an emerging multidisciplinary field where the aim is to link basic research in neuroscience psychology and cognitive science with educational technology Educational neuroscience is often associated with the science of learning and encompasses a broad range of scientific disciplines from basic neuroscience to cognitive psychology to computer science to social theory It is an interdisciplinary research field that seeks to translate research findings on neural mechanisms of learning to educational practice and policy and to understand the effects of education on the brain Neuroscience research usually focuses only on learning but there is a developing subfield within neuroscience called Mind Brain and Education MBE that attempts to link research with teaching MBE researchers consider how to take advantage of the natural human attention span how to use studies about memory systems to inform lesson planning and how to use research on the role of emotions in learning In neuroscience research progress has been extraordinary including advances in both understanding and technology

Scientists from a wide range of disciplines are being attracted to the challenge of understanding the brain. In spite of discoveries regarding the structure of the brain we still do not understand how the nervous system allows us to see, hear, learn, remember and plan certain actions. Educators and schools around the globe are increasingly relying on the knowledge, techniques and programs developed based on a new understanding of how our brains work. This knowledge is being applied to the classroom. A growing amount of attention is being paid to neuroscience and how the results of empirical research may be used to help individuals learn more effectively. In this Research Topic, academic scientists, researchers and scholars will share their experiences and research results on all aspects of brain based learning and educational neuroscience. Furthermore, it provides a premier interdisciplinary platform for researchers, practitioners and educators to present the latest developments, trends and concerns. In addition, it discusses practical challenges encountered and solutions adopted in the field of Educational Neuroscience. The focus of this Research Topic is to bring together academic scientists, researchers and scholars to exchange and share their experiences and research findings related to brain based learning and educational neuroscience. Researchers, practitioners and educators will also be able to present and discuss the newest innovations, trends and concerns. This will include practical challenges encountered and solutions adopted in Educational Neuroscience as well as in related fields. All original and unpublished papers describing conceptual, constructive, empirical, experimental or theoretical work in any area of Brain Based Learning and Educational Neuroscience or studies that explore the intersections between neuroscience, psychology and education are highly encouraged. Aspects, topics and critical issues of interest include, but are not limited to: neuroscience applications in enhanced learning; how students learn mathematics and language; personal motivation; social and emotional learning; motivation; the biology of learning; brain functions and information processing and many others.

**Integrated E-Learning** Wim Jochems, Rob Koper, Jeroen Van Merriënboer, 2004-03-01. It is widely recognized that online and e learning is no longer an exclusive approach used only in distance education and in isolation from traditional education programmes. A real difficulty facing educators and trainers is how to integrate these new learning methods and embed them in established and existing forms of learning, teaching or training. This book forms a serious in depth study of the subject and proposes that e learning is not simply a matter of digitizing traditional materials but involves a new approach which must take into account pedagogical, technological and organizational features to form a well designed education system. A practical focus is maintained throughout with advice on implementation and case studies drawn from the contributors' considerable experience. Integrated E Learning is essential reading for anyone wanting to implement, design, develop or deliver e learning or training courses.

**Air Pollution in Eastern Asia: An Integrated Perspective** Idir Bouarar, Xuemei Wang, Guy P. Brasseur, 2017-08-18. This book, written by an international group of experts from China, Europe and the USA, presents a broad and comprehensive analysis of the chemical and meteorological processes responsible for the formation of air pollutants in eastern Asia and in particular for the development of severe pollution episodes observed.

primarily during winter in the northeastern part of China With the rapid population growth economic development and urbanization occurring in Asia air pollution has become a major environmental problem in this part of the world The book is organized around six distinct parts The first part of the volume offers a general perspective on issues related to air pollution including persistent haze events in eastern and southern Asia The second part presents an overview of air pollution sources i e anthropogenic and biomass burning sources The third part analyzes in situ observations of chemical species in China while the fourth part focuses on space observations of gas phase and aerosol species The modeling aspects are treated in the fifth part of the volume which includes a presentation of several air quality forecast systems and an assessment of the role of urbanization on air pollution levels Finally the effects of air pollution on health and crop productivity in China are discussed in the last part of the book The book also presents an integrated view of past and present situations in Asia and provides the scientific basis from which mitigation policies can be established and air quality can be improved Audience This book is written for scientists educators students environmental managers policy makers and leaders in public administration and private corporations who wish to use science based information to mitigate air pollution The book should help decision makers to design effective policies for air quality improvement and to successfully manage short term air pollution episodes that substantially affect people s quality of life and strongly impact the economy
