During cold weather it is very important to use a good grade of oil that will flow freely through the oil pump screen and permit the engine to start easily. A simple method of checking this is to remove the lower level plug and see if the oil flows freely.

Engine Lubrication When Gasoline Is Used For Fuel

Check the crankcase frequently and keep it filled to the proper level. After every 100 hours of operation and while the engine is still hot, remove the upper level plug, Figure 1, and the crank bearing drain plug, Figure 4. Allow all oil to drain from the crankcase and crank bearing; then replace the drain plug and remove the upper level plug. Refill the crankcase with 15-20 U.S. Quarts of new oil through the filler opening on the magnetic mounting bracket until the oil starts to drain from the upper level plug opening. Be sure to replace the level plug after refilling.
