J265 Physics 2014:

The Physics and Astrophysics of Neutron Stars Luciano Rezzolla, Pierre Pizzochero, David Ian Jones, Nanda Rea, Isaac Vidaña, 2019-01-09 This book summarizes the recent progress in the physics and astrophysics of neutron stars and most importantly it identifies and develops effective strategies to explore both theoretically and observationally the many remaining open questions in the field Because of its significance in the solution of many fundamental questions in nuclear physics astrophysics and gravitational physics the study of neutron stars has seen enormous progress over the last years and has been very successful in improving our understanding in these fascinating compact objects The book addresses a wide spectrum of readers from students to senior researchers Thirteen chapters written by internationally renowned experts offer a thorough overview of the various facets of this interdisciplinary science from neutron star formation in supernovae pulsars equations of state super dense matter gravitational wave emission to alternative theories of gravity The book was initiated by the European Cooperation in Science and Technology COST Action MP1304 Exploring fundamental physics with compact stars NewCompStar **Physics Optics & Modern Physics Vol.5 (2023-24 NTA NEET/JEE Main)** YCT Expert Team , 2023 24 NTA NEET JEE Main Physics Optics Modern Physics Vol 5 Solved Papers **The Solar Activity Cycle** André Balogh, Hugh Hudson, Kristóf Petrovay, Rudolf Steiger, 2015-04-16 A collection of papers edited by four experts in the field this book sets out to describe the way solar activity is manifested in observations of the solar interior the photosphere the chromosphere the corona and the heliosphere The 11 year solar activity cycle more generally known as the sunspot cycle is a fundamental property of the Sun This phenomenon is the generation and evolution of magnetic fields in the Sun s convection zone the photosphere It is only by the careful enumeration and description of the phenomena and their variations that one can clarify their interdependences The sunspot cycle has been tracked back about four centuries and it has been recognized that to make this data set a really useful tool in understanding how the activity cycle works and how it can be predicted a very careful and detailed effort is needed to generate sunspot numbers This book deals with this topic together with several others that present related phenomena that all indicate the physical processes that take place in the Sun and its exterior environment The reviews in the book also present the latest theoretical and modelling studies that attempt to explain the activity cycle It remains true as has been shown in the unexpected characteristics of the first two solar cycles in the 21st century that predictability remains a serious challenge Nevertheless the highly expert and detailed reviews in this book using the very best solar observations from both ground and space based telescopes provide the best possible report on what is known and what is yet to be discovered Originally published in Space Science Reviews Vol 186 Issues 1 4 2014 **Advances in Electronics and Electron Physics** , 2014-05-14 **Advances in Electronics and Electron Physics** **Physics of the Plasma Universe** Anthony L. Peratt, 2014-09-11 Today many scientists recognize plasma as the key element to understanding new observations in near Earth interplanetary interstellar and intergalactic space in stars galaxies and

clusters of galaxies and throughout the observable universe Physics of the Plasma Universe 2nd Edition is an update of observations made across the entire cosmic electromagnetic spectrum over the two decades since the publication of the first edition It addresses paradigm changing discoveries made by telescopes planetary probes satellites and radio and space telescopes The contents are the result of the author's 37 years research at Livermore and Los Alamos National Laboratories and the U S Department of Energy This book covers topics such as the large scale structure and the filamentary universe the formation of magnetic fields and galaxies active galactic nuclei and quasars the origin and abundance of light elements star formation and the evolution of solar systems and cosmic rays Chapters 8 and 9 are based on the research of Professor Gerrit Verschuur and reinvestigation of the manifestation of interstellar neutral hydrogen filaments from radio astronomical observations are given Using data from the Green Bank 100 m telescope GBT of the National Radio Astronomy Observatory NRAO detailed information is presented for a non cosmological origin for the cosmic microwave background quadrupole moment This volume is aimed at graduate students and researchers active in the areas of cosmic plasmas and space science The supercomputer and experimental work was carried out within university National laboratory Department of Energy and supporting NASA facilities

Kenneth Seidelmann,2017-10-05 The uses of time in astronomy from pointing telescopes coordinating and processing observations predicting ephemerides cultures religious practices history businesses determining Earth orientation analyzing time series data and in many other ways represent a broad sample of how time is used throughout human society and in space Time and its reciprocal frequency is the most accurately measurable quantity and often an important path to the frontiers of science But the future of timekeeping is changing with the development of optical frequency standards and the resulting challenges of distributing time at ever higher precision with the possibility of timescales based on pulsars and with the inclusion of higher order relativistic effects The definition of the second will likely be changed before the end of this decade and its realization will increase in accuracy the definition of the day is no longer obvious The variability of the Earth s rotation presents challenges of understanding and prediction In this symposium speakers took a closer look at time in astronomy other sciences cultures and business as a defining element of modern civilization The symposium aimed to set the stage for future timekeeping standards infrastructure and engineering best practices for astronomers and the broader society At the same time the program was cognizant of the rich history from Harrison s chronometer to today s atomic clocks and pulsar observations The theoreticians and engineers of time were brought together with the educators and historians of science enriching the understanding of time among both experts and the public Graphene E. L. Wolf,2014 A complete description of the science and applications of graphene a revolutionary two dimensional one atom thick material of exceedingly high electrical conductivity and tensile strength **Flare Observations in the IRIS Era: What Have We Learned, and What's Next?** Vanessa Polito,Bart de Pontieu,Adam Kowalski,Viggo Hansteen,2023-12-27 Since its launch in 2013 IRIS has observed more than 10 X class over 100 M class and more than 600 C class flares at unprecedented spatial and temporal resolution Thanks to the rich diagnostics that cover the physical conditions of the solar atmosphere from the photosphere to the hottest parts of the flaring corona IRIS observations have provided exciting new results and constraints on flare heating models significantly expanding our knowledge of how flares are triggered and how the non thermal energy is released propagates downward from the corona and is deposited in the low atmosphere At the same time the new discoveries provided by IRIS have raised new unresolved questions and new challenges for theoretical models For instance current hydrodynamic models still cannot fully explain many features observed by IRIS during both the impulsive and gradual phases such as the dynamics of the evaporative condensation flows the large line broadenings and the puzzling complex and broad chromospheric lines In addition important questions remain regarding the details of the energy propagation and dissipation in flares the importance of Alfvén waves vs electron beam and thermal conduction heating and the effects from large scale reconfiguration of the magnetic field during flares Using the Biological Literature Diane Schmidt,2014-04-14 The biological sciences cover a broad array of literature types from younger

fields like molecular biology with its reliance on recent journal articles genomic databases and protocol manuals to classic fields such as taxonomy with its scattered literature found in monographs and journals from the past three centuries Using the Biological Literature A Practical Guide Fourth Edition is an annotated guide to selected resources in the biological sciences presenting a wide ranging list of important sources This completely revised edition contains numerous new resources and descriptions of all entries including textbooks The guide emphasizes current materials in the English language and includes retrospective references for historical perspective and to provide access to the taxonomic literature It covers both print and electronic resources including monographs journals databases indexes and abstracting tools websites and associations providing users with listings of authoritative informational resources of both classical and recently published works With chapters devoted to each of the main fields in the basic biological sciences this book offers a guide to the best and most up to date resources in biology It is appropriate for anyone interested in searching the biological literature from undergraduate students to faculty researchers and librarians The guide includes a supplementary website dedicated to keeping URLs of electronic and web based resources up to date a popular feature continued from the third edition
