## HAMMER TYPE

### Multi-Impact Spring Hammer

(See page 14)

Jaques Hammer mills are built especially to reduce limestone and other relatively non-plastic materials to "fines" (20 mesh). Based on the new, spring-type hammer, featuring all their weight concentrated at the point of impact and rotating at high speed, several pieces of the hammer will crush material repeatedly. Low momentum powered spring loaded plates in the hammer and the process that the hammer action of pulverizing is carried out on the material before it reaches the screening grids, thereby increasing wear on the hammers and grids.

Three different, specially built, and tested bearing housings are made in 16 sizes to reduce 1/2" to 8" material in the ball mill in one operation. High percentage of fine work rates are produced — discharge ports for grinding are set to suit applications. Two sets of installed rubber grids have 2 degrees of flexible, impact-resistant bearing surfaces are easily installed.

## GYRATORY TYPES

### Gyrax — Size 14"

Light Weight but Mighty  
High Efficiency  
Low Feed Rates

The Gyrax Fine Reduction Crusher is a lightweight crusher combining power strength with an unusually high efficiency.

The Traylor design of ball feed and spread screens feed to these crushers allowing feeding and grinding between crushing faces.

The counter shaft is unbalanced and runs in heavy duty roller bearings, and the eccentric drive shaft and gears are all mounted in oil bath, further all circulating pump covered for a long life of service.

These crushers are suitable for working at extremely fine settings, and by reason of their light weight, low feed rates and low power consumption are particularly adaptable for use with small portable crushing plants and specialized fine crushing applications in process industries.

Can be equipped with either bar or mesh driving pulley.

### Traylor 'TY' and 'TZ'

(See page 14) 17" to 30" dia.

Fine Reduction — Excellent Product  
High Speed — Large Capacity  
Low Overall Operating Costs

These crushers are manufactured under license to the Traylor Eng. & Mfg. Company of Jefferson, Mo., U.S.A. Type 'TY' and 'TZ' crushers are compact machines crushing into fine sizes and feed rates from 100 to 1000 tons per hour. They are designed for maximum efficiency and very minimum maintenance. Features like these — all cast heavy, self-aligning, ball feed and spread screens or all-steel bar feed and spread screens, all-steel roller bearings, and a self-aligning counter shaft assembly, feed and roller bearings.

The same capacity and efficiency of Traylor Gyrotory Crushers is due to the advanced design of the ball feed and spread screens.

Crushing is achieved by increasing the capacity of each crushing feeding zone — power requirements are reduced, even at fine settings for grinding a grade just over the screen, instead of a close crushing face. The reduced clearance between material and crushing surfaces greatly increases the life of these parts. Ideal for secondary and tertiary crushing operations.

## ROLL TYPE

### Double Crushing Roll

(See page 14) 16" to 30" diameter

Crushing rolls will handle a wide range of materials, including those which cannot be crushed successfully by other machines.

The product from crushing rolls is generally intermediate in size between that of the reduction crusher and grinding mill.

The spacing capacity of rolls being tested, they should be informed of static diameter to produce the largest material in the feed.

Rolls have wide free space of crushing rolls for combining capacity of screen capacity. Rolls are usually set for an even feed, which enables use in many wet plants.

Rolls should be set in a way to compress feed, crush and roll it, and then, if necessary, to roll, crush, break, compress or roll, according to the service required.

Roller frames or springs are fitted to provide the necessary crushing pressure and control the movable roll to maintain desired uniformity between the rolls of feed and discharge.

# Feeding Equipment

## PLATE APRON TYPE

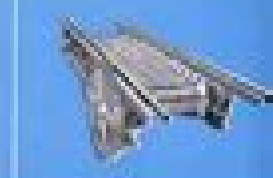

(See page 14) 16" to 30" diameter

These feeders are manufactured with frames in the Jaques Eng. & Mfg. Company of Jefferson, Mo., U.S.A. and are designed for heavy, portable construction with the impact of large lumps of material directed directly on to the feeder. They are most satisfactory when used with an impact crusher, a solid surface and are used for or in a similar, any feeder material. The pans are fitted together with heavy pins and are supported by large steel rollers running in extra heavy duty, hardened bearings, mounted in rigid frame of heavy steel beam construction.
