Cyanobacteria: The Green E. coli Anne M Ruffing, Toivo Kallas, 2016-03-16 As the world struggles to reduce its dependence on fossil fuels and curb greenhouse gas emissions industrial biotechnology is also going green Escherichia coli has long been used as a model Gram negative bacterium not only for fundamental research but also for industrial applications Recently however cyanobacteria have emerged as candidate chassis for the production of commodity fuels and chemicals utilizing CO₂ and sunlight as the main nutrient requirements In addition to their potential for reducing greenhouse gas emissions and lowering production costs

cyanobacteria have naturally efficient pathways for the production metabolites such as carotenoids which are of importance in the nutraceutical industry The unique metabolic and regulatory pathways present in cyanobacteria present new challenges for metabolic engineers and synthetic biologists Moreover their requirement for light and the dynamic regulatory mechanisms of the diurnal cycle further complicate the development and application of cyanobacteria for industrial applications Consequently significant advancements in cyanobacterial engineering and strain development are necessary for the development of a green E coli This Research Topic will focus on cyanobacteria as organisms of emerging industrial relevance including research focused on the development of genetic tools for cyanobacteria the investigation of new cyanobacterial strains the construction of novel cyanobacterial strains via genetic engineering the application of omics tools to advance the understanding of engineered cyanobacteria and the development of computational models for cyanobacterial strain development

Understanding the Importance of Temporal Coupling of Neural Activities in Information Processing Underlying Action and Perception Daya Shankar Gupta, Andreas Bahmer, 2021-10-20 EcoLaw Margaret Davies, 2022-05-01 This book re imagines law as ecolaw The key insight of ecological thinking that everything is connected to everything else at least on the earth and possibly in the cosmos has become a truism of contemporary theory Taking this insight as a starting point for understanding law involves suspending theoretical certainties and boundaries It involves suspending theory itself as a conceptual project and practicing it as an embodied and material project Although an ecological imagining of law can be metaphorical and can be highly imaginative and suggestive this book shows that it is also literal Law is part of the material everything that is connected to everything else This means that once the previous certainties of legal thinking have been dismantled it is after all possible to think of law as natural as embedded in and emergent from a normative biophysical nature The book proposes that there exists a natural nomos animals plants and Earth systems that produce their own values and norms from which human norms and laws emerge This book then proposes a new way to understand law and pursues specific arguments to demonstrate the feasibility of law as ecolaw Drawing inspiration from current trends in the post humanities socioecological thought and developments across the natural sciences in their specific intersections with humanities and social science disciplines this book will appeal both to legal theorists and to others with interests in these areas

Molyneux's Question and the History of Philosophy Gabriele Ferretti, Brian Glenney, 2020-09-15 In 1688 the Irish scientist and politician William Molyneux sent a letter to the philosopher John Locke In it he asked him a question could someone who was born blind and able to distinguish a globe and a cube by touch be able to immediately distinguish and name these shapes by sight if given the ability to see The philosophical puzzle offered in Molyneux s letter fascinated not only Locke but major thinkers such as Leibniz Berkeley Diderot Reid and numerous others including psychologists and cognitive scientists today Does such a question represent a philosophical puzzle or a problem that can be solved by experimental tests Can vision be fully restored after blindness What is the relation between vision and

touch Are the senses linked through learning or bound at birth Molyneux's Question and the History of Philosophy is a major collection of essays that explore the long standing issues Molyneux's problem presents to philosophy of mind perception and the senses In addition the volume considers the question from an interdisciplinary angle examines the pre history of the question and aspects of it that have been ignored such as perspectives from religion and disability As such Molyneux's Question and the History of Philosophy presents a set of philosophically rich empirically informed and scientifically rigorous original investigations into this famous puzzle It will be of great interest to students and researchers in philosophy psychology and the cognitive sciences including neuroscience neurobiology and ophthalmology as well as those studying the mind perception and the senses

Microbial Symbiosis of Marine Sessile Hosts - Diversity, Function and

Applications Suhelen Egan, Torsten Thomas, 2015-12-21 Modern molecular omics tools metagenomics metaproteomics etc have greatly contributed to the rapid advancement of our understanding of microbial diversity and function in the world's oceans These tools are now increasingly applied to host associated environments to describe the symbiotic microbiome and obtain a holistic view of marine host microbial interactions Whilst all eukaryotic hosts are likely to benefit from their microbial associates marine sessile eukaryotes including macroalgae seagrasses and various invertebrates sponges ascidians corals hydroids etc rely in particular on the function of their microbiome For example marine sessile eukaryotes are under constant grazing colonization and fouling pressure from the millions of micro and macroorganisms in the surrounding seawater Host associated microorganisms have been shown to produce secondary metabolites as defense molecules against unwanted colonization or pathogens thus having an important function in host health and survival Similarly microbial symbionts of sessile eukaryotes are often essential players in local nutrient cycling thus benefiting both the host and the surrounding ecosystem Various research fields have contributed to generating knowledge of host associated systems including microbiology biotechnology molecular biology ecology evolution and biotechnology Through a focus on model marine sessile host systems we believe that new insight into the interactions between host and microbial symbionts will be obtained and important areas of future research will be identified This research topic includes original research review and opinion articles that bring together the knowledge from different aspects of biology and highlight advances in our understanding of the diversity and function of the microbiomes on marine sessile hosts
