Genesis Pro Features

Draw

The main handle section on your Genesis Pro bow is machined 6061 T6 aluminum. This material is engineered to provide the Genesis Pro with optimal balance while being both extremely durable and very lightweight.

Larger reinforced clearance area

An increased range of vertical adjustment accommodates many modern bows and allows for increased bow string clearance. The Genesis Pro does not include a rest. Choose a rest that suits your needs and shooting style.

Idler Wheel

The idler wheel is located at the upper limb of the bow. The main function of the idler wheel is to transfer drawstring from the bow limbs back through the string to the arrow in a smooth and consistent way. The

drawings in the idler wheel are made of a very low friction synthetic material which reduces friction.

Cables and Lock Bells

The cables on your Genesis Pro bow are attached to each end of the bow. They store the potential energy you put into the bow until the string is released. As the moment of release, the stored potential energy is transferred into string to motion, and the arrow is propelled toward the target.

The bow limbs attach the draw to the bow and are also used to adjust the draw length on your bow. Using a 1/4" hex wrench, the lock bells can be turned in a counter-clockwise direction to decrease the drawlength of the bow to a maximum of 15 lbs. Turning the lock bells clockwise will return the bow to its maximum of 35 lbs. One full turn equals approximately 1/4 lbs. of draw weight.

The lock bells on each limb should always be turned the same number of turns when adjusting bow drawlength.

With the Genesis Pro you can be assured of the best of all, you can customize the bow and still have fun!

Genesis Pro Bowstring System

The Genesis Pro bow features single cam design. The idler wheel can adjust the bow to maintain the set percentage throughout the draw cycle. The idler wheel acts as an idler wheel and guides the bow string. When the bowstring is released, the bow creates a greater effect, which results in a better arrow while increasing bow speed.

Draw Stop

Customizing the Genesis Pro to your draw length is easy!

The draw stop on the Genesis® Pro is adjusted with an Allen wrench. Simply turn the draw stop counter-clockwise until it is completely removed. Draw it to the desired draw stop position, tighten with security in place. Use the larger diameter draw stop to adjust to 1" (approx.) increments and the smaller diameter draw stop to adjust to 1/2" (approx.) increments.

Tip

The double mounting on your Genesis bow is actually designed to fit the contours of your hand, providing both comfort and consistency.

Shooting

Be sure you're Genesis Pro bow with a high-strength, durable backstring back from each of the two limbs. The backstring provides superior performance, ensuring that the maximum amount of the bow's stored energy is transferred to the arrow.

Power Cable and Cable Guard

The power cable is the second component of the bowstring assembly. It is anchored at the ends on the upper limb and wraps around the idler wheel back on the bow string. It is mounted on the lower limb.

The cable guard is the metal rod which supports the sliding cable cap and helps the cable supply off to one side and out of the light path of the arrow.

Mounting Plate

You or your local pro shop must properly install a string rest to ensure proper arrow position on the string for dependable accuracy.

WARNING: Please confirm that arrow rest are in proper length and adjust to your bow's draw weight and draw length. Test and follow your arrow manufacturer's recommendations.
