Nonarchimedean and Tropical Geometry Matthew Baker, Sam Payne, 2016-08-18 This volume grew out of two Simons Symposia on Nonarchimedean and tropical geometry which took place on the island of St John in April 2013 and in Puerto Rico in February 2015 Each meeting gathered a small group of experts working near the interface between tropical geometry and nonarchimedean analytic spaces for a series of inspiring and provocative lectures on cutting edge research interspersed with lively discussions and collaborative work in small groups The articles collected here which include high level surveys as well as original research mirror the main themes of the two Symposia Topics covered in this volume include Differential forms and currents and solutions of Monge Ampere type differential equations on Berkovich spaces and their skeletons The homotopy types of nonarchimedean analytifications The existence of faithful tropicalizations which encode the topology and geometry of analytifications Relations between nonarchimedean analytic spaces and algebraic geometry including logarithmic schemes birational geometry and the geometry of algebraic curves Extended notions of tropical varieties which relate to Huber's theory of adic spaces analogously to the way that usual tropical varieties relate to Berkovich spaces and Relations between nonarchimedean geometry and combinatorics including deep and fascinating connections between matroid theory tropical geometry and Hodge theory

Painlevé III: A Case Study in the Geometry of Meromorphic Connections Martin A. Guest, Claus Hertling, 2017-10-14 The purpose of this monograph is two fold it introduces a conceptual language for the geometrical objects underlying Painlevé equations and it offers new results on a particular Painlevé III equation of type PIII D6 called PIII 0

0 4 4 describing its relation to isomonodromic families of vector bundles on P^1 with meromorphic connections This equation is equivalent to the radial sine or sinh Gordon equation and as such it appears widely in geometry and physics It is used here as a very concrete and classical illustration of the modern theory of vector bundles with meromorphic connections Complex multi valued solutions on C are the natural context for most of the monograph but in the last four chapters real solutions on R with or without singularities are addressed These provide examples of variations of TERP structures which are related to tt geometry and harmonic bundles As an application a new global picture is given

Foundations of Arithmetic Differential Geometry Alexandru Buium, 2023-11-20 The aim of this book is to introduce and develop an arithmetic analogue of classical differential geometry In this new geometry the ring of integers plays the role of a ring of functions on an infinite dimensional manifold The role of coordinate functions on this manifold is played by the prime numbers The role of partial derivatives of functions with respect to the coordinates is played by the Fermat quotients of integers with respect to the primes The role of metrics is played by symmetric matrices with integer coefficients The role of connections respectively curvature attached to metrics is played by certain adelic respectively global objects attached to the corresponding matrices One of the main conclusions of the theory is that the spectrum of the integers is intrinsically curved the study of this curvature is then the main task of the theory The book follows and builds upon a series of recent research papers A significant part of the material has never been published before

Introduction to Differential Geometry Joel W. Robbin, Dietmar A.

Salamon, 2022-01-12 This textbook is suitable for a one semester lecture course on differential geometry for students of mathematics or STEM disciplines with a working knowledge of analysis linear algebra complex analysis and point set topology The book treats the subject both from an extrinsic and an intrinsic view point The first chapters give a historical overview of the field and contain an introduction to basic concepts such as manifolds and smooth maps vector fields and flows and Lie groups leading up to the theorem of Frobenius Subsequent chapters deal with the Levi Civita connection geodesics the Riemann curvature tensor a proof of the Cartan Ambrose Hicks theorem as well as applications to flat spaces symmetric spaces and constant curvature manifolds Also included are sections about manifolds with nonpositive sectional curvature the Ricci tensor the scalar curvature and the Weyl tensor An additional chapter goes beyond the scope of a one semester lecture course and deals with subjects such as conjugate points and the Morse index the injectivity radius the group of isometries and the Myers Steenrod theorem and Donaldson's differential geometric approach to Lie algebra theory

The Geometry of Four-manifolds S. K. Donaldson, P. B. Kronheimer, 1997 This book provides the first lucid and accessible account of the modern study of the geometry of four manifolds It presents both a thorough treatment of the main lines of the developments and also a wide ranging treatment of relevant topics from geometry and global analysis

Generalized Ricci Flow Mario Garcia-Fernandez, Jeffrey Streets, 2021-04-06 The generalized Ricci flow is a geometric evolution equation which has recently emerged from investigations into mathematical physics Hitchin's generalized geometry program and complex

geometry This book gives an introduction to this new area discusses recent developments and formulates open questions and conjectures for future study The text begins with an introduction to fundamental aspects of generalized Riemannian complex and Kähler geometry This leads to an extension of the classical Einstein Hilbert action which yields natural extensions of Einstein and Calabi Yau structures as canonical metrics in generalized Riemannian and complex geometry The book then introduces generalized Ricci flow as a tool for constructing such metrics and proves extensions of the fundamental Hamilton Perelman regularity theory of Ricci flow These results are refined in the setting of generalized complex geometry where the generalized Ricci flow is shown to preserve various integrability conditions taking the form of pluriclosed flow and generalized Kähler Ricci flow leading to global convergence results and applications to complex geometry Finally the book gives a purely mathematical introduction to the physical idea of T duality and discusses its relationship to generalized Ricci flow The book is suitable for graduate students and researchers with a background in Riemannian and complex geometry who are interested in the theory of geometric evolution equations

Modeling and Analysis of Modern Fluid Problems

Liancun Zheng,Xinxin Zhang,2017-04-26 Modeling and Analysis of Modern Fluids helps researchers solve physical problems observed in fluid dynamics and related fields such as heat and mass transfer boundary layer phenomena and numerical heat transfer These problems are characterized by nonlinearity and large system dimensionality and exact solutions are impossible to provide using the conventional mixture of theoretical and analytical analysis with purely numerical methods To solve these complex problems this work provides a toolkit of established and novel methods drawn from the literature across nonlinear approximation theory It covers Padé approximation theory embedded parameters perturbation Adomian decomposition homotopy analysis modified differential transformation fractal theory fractional calculus fractional differential equations as well as classical numerical techniques for solving nonlinear partial differential equations In addition 3D modeling and analysis are also covered in depth Systematically describes powerful approximation methods to solve nonlinear equations in fluid problems Includes novel developments in fractional order differential equations with fractal theory applied to fluids Features new methods including Homotopy Approximation embedded parameter perturbation and 3D models and analysis
