Evidence-based approaches in aging and public health Brijesh Sathian,Edwin van Teijlingen,Padam Simkhada,Hanadi Al Hamad,Russell Kabir,2024-04-15      **The Report: Qatar 2009** ,2004      **Tailoring NK Cell Receptor-Ligand**

**Interactions: an Art in Evolution, 2nd Edition** Ulrike Koehl,Antoine Toubert,Gianfranco Pittari,2018-11-13 Recognition and killing of aberrant infected or tumor targets by Natural Killer NK cells is mediated by positive signals transduced by

activating receptors upon engagement of ligands on target surface. These stimulatory pathways are counterbalanced by inhibitory receptors that raise NK cell activation threshold through negative antagonist signals. While regulatory effects are necessary for physiologic control of autoimmune aggression, they may restrain the ability of NK cells to activate against disease. Overcoming this barrier to immune surveillance, multiple approaches to enhance NK mediated responses are being investigated since two decades. Propelled by considerable advances in the understanding of NK cell biology, these studies are critical for effective translation of NK based immunotherapy principles into the clinic. In humans, dominant inhibitory signals are transduced by Killer Immunoglobulin Like Receptors (KIR) recognizing cognate HLA class I on target cells. Conversely, KIR recognition of missing self HLA due to HLA loss or HLA KIR mismatch triggers NK mediated tumor rejection. Initially observed in murine transplant models, these antitumor effects were later found to have important implications for the clinical outcome of haplotype mismatched stemcell transplantation. Here, donor NK subsets protect against acute myeloid leukemia (AML) relapse through missing self recognition of donor HLA C allele groups C1 or C2 and/or Bw4 epitope. These studies were subsequently extended by trials investigating the antileukemia effects of adoptively transferred haplotype mismatched NK cells in non transplant settings. Other mechanisms have been found to induce clinically relevant NK cell alloreactivity in transplantation, e.g. post reconstitution functional reversal of anergic NK cells. More recently, activating KIR came into the spotlight for their potential ability to directly activate donor NK cells through in vivo recognition of HLA or other ligands. Novel therapeutic monoclonal antibodies (mAb) may optimize NK mediated effects. Examples include obinutuzumab (GA101), a glyco engineered anti CD20 mAb with increased affinity for the Fc  $\gamma$ RIIIa receptor enhancing antibody dependent cellular cytotoxicity; lirilumab (IPH2102), a first in class NK specific checkpoint inhibitor blocking the interaction between the major KIR and cognate HLA C antigens; and elotuzumab (HuLuc63), a humanized monoclonal antibody specific for SLAMF7 whose anti myeloma therapeutic effects are partly due to direct activation of SLAMF7 expressing NK cells. In addition to conventional antibodies, NK cell targeted bispecific BiKEs and trispecific TriKEs (killer engagers) have also been developed. These proteins elicit potent effector functions by binding target ligands, e.g. CD19, CD22, CD30, CD133, HLA class II, EGFR, on one arm and NK receptors on the other. An additional innovative approach to direct NK cell activity is genetic reprogramming with chimeric antigen receptors (CAR). To date, primary NK cells and the NK92 cell line have been engineered with CAR specific for antigens expressed on multiple tumors. Encouraging preclinical results warrant further development of this approach. This Research Topic welcomes contributions addressing mechanisms of NK mediated activation in response to disease as well as past and contemporary strategies to enhance NK mediated reactivity through control of the interactions between NK receptors and their ligands.

*Research Ethics in the Arab Region* Henry Silverman, 2018-01-09. This book addresses the pressing issues involved with the ethical conduct of research in one developing world region, the Arab Region. Clinical research has soared in the developing world as pharmaceutical companies continue their search for regions with

large treatment naive populations including the Arab region and has profound implications for the health and the economies for the area. The ethical issues involved with the conduct of such research however have so far not been adequately addressed. This volume presents the issues regarding research ethics and research governance that have relevance for health authorities, regulators, industry and academia. As a multi-authored volume, it includes both international and local experts on ethical issues in research representing all stakeholders, thus presenting a balanced view on this timely topic.

**The Strategic Planning Process** Marios Katsioloudes, Arpi K Abouhanian, 2016-12-14. Strategic management is a field that has diversity in approach and scope but relative homogeneity in pedagogy. This book, a refreshed edition of its successful predecessor, brings something different to the field by concisely introducing it with a focus on doing business in the Middle East and North Africa. Supplemented by online case studies and other resources, the reader is exposed to a plethora of concepts, theories, practical implications and experiential exercises in the strategic management process. The updated text explores key regional issues including the Arab Spring, economic recession, corporate social responsibility, the role of women in business and the rise of emerging economies. The reader is encouraged to look at the world in light of the challenges many organizations are facing around the globe. Features like 'Stop and Think Critically' and 'Focus points' throughout each chapter encourage and inspire a thoughtful reading of the text. This is a book designed to aid undergraduate and graduate students as well as managers in both for-profit and non-profit sectors. The authors guide the reader through both new and ongoing issues in the field of strategic management and allow them to foster a greater understanding of this ever-developing field.

**Novel biomarkers in tumor immunity and immunotherapy** Takaji Matsutani, Esra Akbay, Eyad Elkord, 2024-07-26. Immune checkpoint inhibitors (ICIs) such as anti-PD-1 and anti-PD-L1 antibodies are highly effective against many types of cancer, yet durable responses are limited to a subset of patients, highlighting the need for the development of effective biomarkers to predict prognosis and efficacy. Currently, PD-L1 expression in tumors, microsatellite instability (MSI) or mismatch repair deficiency (dMMR) and tumor mutation burden (TMB) are known as biomarkers for cancer immunotherapy but are not sufficient. Combination therapy with immune checkpoint inhibitors and chemotherapy or radiation therapy as well as diverse therapies targeting intra-tumoral regulatory T cells have been described but there are currently no unifying biomarkers that are applicable to clinically a simple, fast, non-invasive method that can yield biomarkers of disease with a minimal adverse effect on patients is desirable. Recent findings suggest that the balancing of effector T cells and regulatory cells in the tumor microenvironment is associated with cancer progression and prognosis. Cells and molecules involved in the control of cancer are complex and a better understanding of the tumor immune environment will lead to the development of truly effective biomarkers. This topic will focus on novel biomarkers that predict efficacy, prognosis or the development of adverse events in various cancer immunotherapies and extensive basic research leading to the development of biomarkers. Manuscripts consisting solely of bioinformatics or computational analysis of public genomic or transcriptomic databases which are not

accompanied by robust and relevant validation clinical cohort or biological validation in vitro or in vivo are out of scope for this topic We expect a wide range of research not only in serology genetics and immunocytochemistry but also in bacterial flora Research on the development of novel assays and bioinformatics methods is also welcome Non invasive biomarkers for cancer immunotherapy Bulk RNA seq scRNA seq or Rep seq methods Correlation of tumor immune cells with gut microbiota in tumor immunotherapy Impact of Teff and Treg balance in the tumor microenvironment on tumor prognosis Inflammatory and immune signatures associated with drug response versus resistance in cancer The Report: Qatar 2008 ,2008
