Linking Species & Ecosystems Clive G. Jones, John H. Lawton, 2012-12-06 I was asked to introduce this volume by examining why a knowledge of ecosystem functioning can contribute to understanding species activities dynamics and assemblages I have found it surprisingly difficult to address this topic On the one hand the answer is very simple and general because all species live in ecosystems they are part of and dependent on ecosystem processes It is impossible to understand the abundance and distribution of populations and the species diversity and composition of communities without a knowledge of their abiotic and biotic environments and of the fluxes of energy and matter through the ecosystems of which they are a part But everyone knows this It is what ecology is all about e.g. Likens 1992 It is why the discipline has retained its integrity and thrived despite a sometimes distressing degree of bickering and chauvinism among its various subdisciplines physiological behavioral population community and ecosystem ecology

Learner-Centered Teaching Activities for Environmental and Sustainability Studies Loren B. Byrne, 2016-03-21 Learner centered teaching is a pedagogical approach that emphasizes the roles of students as participants in and drivers of their own learning Learner centered teaching activities go beyond traditional lecturing by helping students construct their own understanding of information develop skills via hands on engagement and encourage personal reflection through metacognitive tasks In addition learner centered classroom approaches may challenge students preconceived notions and expand their thinking by confronting them with thought provoking statements tasks or scenarios that cause them to pay closer attention and cognitively see a topic from new perspectives Many types of pedagogy fall under the umbrella of learner centered teaching including laboratory work group discussions service and project based learning and student led research among others Unfortunately it is often not possible to use some of these valuable methods in all course situations given constraints of money space instructor expertise class meeting and instructor preparation time and the availability of prepared lesson plans and material Thus a major challenge for many instructors is how to integrate learner centered activities widely into their courses The broad goal of this volume is to help advance environmental education practices that help increase students environmental literacy Having a diverse collection of learner centered teaching activities is especially useful for helping students develop their environmental literacy because such approaches can help them connect more personally with the material thus increasing the chances for altering the affective and behavioral dimensions of their environmental literacy This volume differentiates itself from others by providing a unique and diverse collection of classroom activities that can help students develop their knowledge skills and personal views about many contemporary environmental and sustainability issues
