Psychophysiology of the Gastrointestinal Tract Rupert Holzl, 2012-12-06 Over a quarter century ago Flanders Dunbar in her 1954 compendium on *Emotion and Bodily Changes* surveyed over 5 000 references on psychosomatic interrelationships including a literature on psychic factors in gastrointestinal disorders dating back to 1845 The title of the present volume suggests a line of descent from these early initiatives but important changes are in the making Indeed the form and substance of long overdue reformulations are clearly reflected in the scholarly contributions which enhance this report of the 1980 Munich symposium proceedings Traditional psychosomatic approaches to understanding the gastrointestinal system and its functional disorders have been based in large part on two virtually unchallenged assumptions

In the first instance unobserved indeed unobservable psychological processes have been considered causally related to disease onset and or to fluctuations in the course of the disease And secondly it has been assumed that psychotherapeutic interventions for disease management should be designed to alter these hypothesized psychic antecedents More recently however a new paradigm for analyzing the relationships involving disordered physiological functions and behavioral interactions has been developed within the framework of what has been termed behavioral medicine The conceptual boundaries of this relatively new approach to behavioral physiology have not yet been firmly established but the major differences between the new behavioral model and the traditional psychosomatic model are brought into sharp relief by the experimental and clinical contributions to the present volume *Gastrointestinal Physiology* Menizibeya Osain

language It reveals the prevalence of descriptions of the development of the human body from conception to birth found in all forms of Tibetan religious literature as well as in medical texts and in art By analysing stories of embryology Frances Garrett explores questions of cultural transmission and adaptation How did Tibetan writers adapt ideas inherited from India and China for their own purposes What original views did they develop on the body on gender on creation and on life itself The transformations of embryological narratives over several centuries illuminate key turning points in Tibetan medical history and its relationship with religious doctrine and practice Embryology was a site for both religious and medical theorists to contemplate profound questions of being and becoming where topics such as pharmacology and nosology were left to shape secular medicine The author argues that in terms of religion stories of human development comment on embodiment gender socio political hierarchy religious ontology and spiritual progress Through the lens of embryology this book examines how these concerns shift as Tibetan history moves through the formative renaissance period of the twelfth through to the seventeenth centuries
